Welcome to InfoGenie

InfoGenie is an autonomous marketing intelligence platform. Give it a website or an industry and within 60 seconds it maps the competitive landscape, identifies your real competitors, surfaces the messages winning against you, and ships a 90-day execution plan you can act on the same day.

This manual covers every tool in the platform. Each module follows the same pattern: what it does, what to feed it, what you get back, and how to use it well. Read end-to-end the first time, then jump in via the table of contents.

How the platform works

Five stages compound on each other. Skipping one weakens the rest.

The InfoGenie Loop

Five stages that compound: each cycle sharpens the next.

Quick start
— your first
60 seconds

Get to your first insight in 60 seconds

1

Enter URL

Type your website (or pick an industry).

2

Choose country

Pick the market that matters for you.

3

Click Analyse Now

InfoGenie maps the market, finds 5+ real competitors and generates a full battle plan.

4

Review the dashboard

KPIs, competitor cards, traffic mix, and the 90-day roadmap appear automatically.

5

Take action

Click any "Counter This Message", launch a campaign, or push an audience to your ad accounts.

Getting Started

The home screen — where every InfoGenie session begins.

2

TOOLS

-
- **Home / Welcome Screen**
The starting point of the platform. Enter your website (or pick an industry), choose a target country, and trigger the full intelligence run from a single button.
 - **Get Started Roadmap**
A guided checklist that walks you through every first-time setup step in priority order.

WHAT IT DOES

The starting point of the platform. Enter your website (or pick an industry), choose a target country, and trigger the full intelligence run from a single button.

Why it matters: Use this every time you start a new analysis — one click here is what powers the dashboards, audiences and campaigns in every other tab.

Live view: Home / Welcome Screen

INPUTS

- Website URL or industry/sector dropdown
- Target country
- "Analyse Now" trigger

OUTPUTS

- Triggers the full analysis pipeline (competitors, KPIs, Battle Plan, audiences)
- Routes you straight to the Intelligence Report dashboard

HOW TO USE IT

Open the app — you land here automatically. Type your domain (or pick a sector if you don't have one yet), confirm the country, then click "Analyse Now". Within ~60 seconds the rest of the platform is populated with live data.

Get Started Roadmap

GETTING
STARTED

WHAT IT DOES

A guided checklist that walks you through every first-time setup step in priority order.

Why it matters: Best for your first week on the platform — the roadmap stops you wandering and gets you to a live, optimised account in days, not months.

Live view: Get Started Roadmap

INPUTS

- Click any open task to jump straight to that module

OUTPUTS

- Live progress bar
- Task completion ticks across the platform

HOW TO USE IT

Open Roadmap any time you feel stuck. Knock off the next open task — each one unlocks more downstream value.

Analyse

Understand the market through competitor intelligence, search data, and live monitoring.

34

TOOLS

-
- Intelligence Report (Dashboard)
 - Competitive Intelligence Engine
 - Intelligence Hub
 - AI Battle Plan
 - Competitor Battle Cards
 - Ad Library Spy
 - Competitor Tech Stack Detector
 - Competitor Pricing Watcher
 - Job Board Spy
 - Share of Voice Tracker
 - Crisis Radar
 - ICP Studio
 - Voice of Customer Mining
 - Review Aggregator
 - Glassdoor Sentiment
 - Mention Tracker
 - Reddit Intel
 - Reddit & Community Pulse
 - Twitter / X Pulse
 - Quora Mining
 - YouTube Channel Monitor
 - Podcast Mention Monitor
 - Newsletter Tracker

Intelligence Report (Dashboard)

ANALYSE

WHAT IT DOES

High-level overview of the competitive landscape with AI-driven growth recommendations.

Why it matters: Your "30-second daily check" — open it first thing each morning to see whether your numbers are trending up or down vs. the competition.

Live view: Intelligence Report (Dashboard)

INPUTS

- Website URL or industry/sector
- Target country

OUTPUTS

- KPI grid (CTR, ROAS, traffic)
- Side-by-side performance charts
- 12-month traffic & spend trends
- Competitor intelligence summary

HOW TO USE IT

Enter your website or pick an industry on the home screen, choose your target country, and click "Analyse Now". The dashboard populates within 60 seconds.

Competitive Intelligence Engine

ANALYSE

WHAT IT DOES

Deep-dive analysis into specific competitors — traffic sources, threat levels, ad creative, and counter-attack plans.

Why it matters: Use when you suspect a rival is gaining ground — the threat scoring tells you exactly where they are winning and what to do about it.

Live view: Competitive Intelligence Engine

INPUTS

- Manual competitor URLs (optional)

OUTPUTS

- Competitor cards
- Threat-level scoring
- Ad creative insights
- "Attack Plan" per competitor

HOW TO USE IT

Open the Competitors view after running an analysis. Click any competitor card to drill into their channel mix and see the recommended counter-strategy.

WHAT IT DOES

Real-time monitoring of competitor signals and predictive market moves.

Why it matters: Best for spotting moves before they hit your revenue — alerts fire when a competitor changes pricing, launches a campaign or shifts ad spend.

Live view: Intelligence Hub

INPUTS

- Auto-derived from analysis

OUTPUTS

- Predictive signals
- Budget-shift alerts
- 90-day domination roadmap
- Exportable report

HOW TO USE IT

Open the Intelligence Hub from the Analyse menu. Use "Counter This Message" on any competitor message to launch a counter-campaign in one click.

WHAT IT DOES

Strategic execution roadmap tailored to the identified market gaps.

Why it matters: Read this once after every analysis run — it converts the raw competitor data into a prioritised 90-day action list any team can execute.

Live view: AI Battle Plan

INPUTS

- Competitor analysis results

OUTPUTS

- Implementation steps
- 90-day strategic priorities
- Tactical playbook

HOW TO USE IT

Generated automatically after an analysis run. Review priorities top-to-bottom and assign owners.

Competitor Battle Cards

ANALYSE

WHAT IT DOES

Auto-generated 1-page intel briefs per competitor — positioning, strengths, weaknesses, and how to win against them.

Why it matters: Hand these to sales before any pitch — a one-page intel brief on how to position against, and win deals over, each named rival.

The screenshot displays the InfoGenie web application interface. At the top, there's a navigation bar with the InfoGenie logo and several menu items: 'Pro', 'Manual', and 'Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The main content area is titled 'COMPETE BATTLE CARDS' and features a 'New Battle Card' button. Two competitor battle cards are shown side-by-side. The first card is for 'XM' (xm.com vs cmtrading) and the second is for 'fxpro' (cmtrading.com vs cmtrading). Each card contains a brief description, a positioning statement, a list of strengths and weaknesses, recent moves, and counter-plays. The cards are generated on 5/12/2026 at 3:38:17 PM.

COMPETE BATTLE CARDS

Competitor Battle Cards

Auto-generated 1-page intel briefs per competitor — positioning, strengths, weaknesses, recent moves, and concrete counter-plays.

XM
xm.com
vs cmtrading

XM is a global trading platform offering competitive pricing and a diverse range of trading instruments. They focus on attracting retail traders with zero-commission accounts and enhanced educational resources.

Positioning: XM positions itself as a user-friendly platform catering to novice traders with extensive educational tools and a broad market presence.

STRENGTHS

- Strong global presence with a wide reach
- Diverse range of trading instruments available
- Zero commissions on select accounts
- Enhanced educational resources for traders

WEAKNESSES

- Mixed reviews on customer support quality
- Potentially overwhelming for novice traders due to variety
- Limited advanced trading tools for experienced users
- Focus on retail traders may overlook institutional clients

RECENT MOVES

- Expanded educational resources for novice traders
- Introduced zero-commission accounts for competitive pricing
- Enhanced trading tools to attract more users

COUNTER-PLAYS

- Develop a dedicated customer support team to improve user experience and responsiveness.
- Launch a targeted marketing campaign highlighting superior support and personalized trading services.
- Create advanced trading tools and resources to attract experienced traders and differentiate from XM.
- Offer exclusive webinars and one-on-one coaching sessions to enhance trader engagement and loyalty.

Generated 5/12/2026, 3:38:17 PM

fxpro
cmtrading.com
vs cmtrading

FxPro is a well-established trading service provider that caters to both retail and institutional clients with competitive pricing. They have recently expanded into cryptocurrencies, enhancing their market appeal.

Positioning: FxPro positions itself as a technology-driven trading solution provider with a strong emphasis on advanced trading platforms and a reputable brand.

STRENGTHS

- Strong brand reputation in the trading industry
- Advanced trading platforms with innovative features
- Competitive pricing tiers for various client segments
- Diverse product offerings including cryptocurrencies

WEAKNESSES

- Limited customer support options for users
- Regulatory scrutiny in certain regions affecting trust
- Less personalized service compared to smaller firms
- High dependency on technology which may alienate some users

RECENT MOVES

- Expanded product offerings to include cryptocurrencies
- Enhanced trading platforms with new features
- Increased marketing efforts targeting global clients

COUNTER-PLAYS

- Enhance customer support with 24/7 availability and multilingual options.
- Offer personalized trading solutions and dedicated account managers.
- Launch targeted marketing campaigns highlighting regulatory compliance and trust.
- Develop user-friendly educational resources to attract novice traders.

Generated 5/12/2026, 1:58:55 PM

Live view: Competitor Battle Cards

INPUTS

- Competitor name + domain (or pick from analysed list via dropdown)

OUTPUTS

- Side-by-side battle card
- Win/loss themes
- Exportable PDF

HOW TO USE IT

Click "Generate Battle Card", pick a competitor from the dropdown (or type one), and download the resulting one-pager for your sales team.

WHAT IT DOES

Pulls competitors' currently-running ads from Meta, Google, LinkedIn, TikTok and X — all in one fan-out.

Why it matters: Best for stealing the angles that already work — see live creative from rivals across 5 networks without paying for a separate spy tool.

InfoGenie

Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

COMPETE AD LIBRARY SPY

Ad Library Spy

Pull competitors' currently-running ads from Meta (live Graph API), Google Ads Transparency Center, LinkedIn Ad Library, TikTok Ad Library, and X (Twitter) Ads Transparency.

Search Ad Libraries

BRAND / ADVERTISER: e.g. Nike

COUNTRY: United States (US)

PLATFORMS TO SEARCH

- ☒ Meta Ad Library
- ☒ Google Ads (Search - Display - YouTube)
- ☒ TikTok Ad Library
- ☒ LinkedIn Ad Library
- ☒ X (Twitter) Ads Transparency

Select all

Run Ad Library Search

Meta = live Graph API - the rest scrape each platform's public ad transparency archive (requires PERPLEXITY_API_KEY).

Live view: Ad Library Spy

INPUTS

- Brand name
- Country
- Platform checklist (Meta / Google / LinkedIn / TikTok / X)

OUTPUTS

- Per-platform ad list with creative, copy and platform link

HOW TO USE IT

Type the brand, pick the country from the search-able dropdown, tick the platforms you want, then hit Run. Each platform fetches in parallel.

Competitor Tech Stack Detector

ANALYSE

WHAT IT DOES

Identifies the analytics, ad platforms, CMS, and frameworks any competitor is running.

Why it matters: Use to spot what tools competitors actually pay for — a fast way to size their marketing budget and uncover gaps in your own stack.

The screenshot shows the InfoGenie web application interface. At the top is a dark navigation bar with the InfoGenie logo, a 'Pro' badge, and several utility icons. Below this is a secondary navigation bar with tabs for 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header for 'COMPETE TECH STACK DETECTOR' with the title 'Competitor Tech Stack Detector' and a brief description. Below this are two input sections: 'Single domain — full stack breakdown' with a text field containing 'nike.com' and a red 'Detect' button; and 'Compare 2-5 domains side-by-side' with a text field containing 'e.g. nike.com, adidas.com, puma.com', a blue button for 'Use my analysed competitors', and a red 'Compare' button.

Live view: Competitor Tech Stack Detector

INPUTS

- Up to 5 competitor domains (or click "Use my analysed competitors" to auto-fill)

OUTPUTS

- Side-by-side tech matrix
- Differences vs your stack

HOW TO USE IT

Paste the domains (or click the AI-suggest button), then hit Detect. Differences highlight gaps you should investigate.

Competitor Pricing Watcher

ANALYSE

WHAT IT DOES

Tracks competitor product URLs to extract and monitor pricing changes over time.

Why it matters: Set this up the moment you suspect a rival is undercutting you — automated price alerts protect your margin without daily manual checks.

The screenshot shows the 'Competitor Pricing Watcher' interface in the InfoGenie application. At the top, there's a navigation bar with 'InfoGenie' logo, a 'Pro' badge, and buttons for 'Manual' and '+ Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header with 'COMPETE PRICING WATCHER' and 'Competitor Pricing Watcher'. Below the header, there's a text input field for 'Label' (e.g., Nike Air Max 270), a dropdown for 'Competitor' (e.g., Nike), and a text input for 'URL' (https://...). Each input has a 'Suggest' button. An '+ Add' button is on the right. Below this, there's a section for 'cmtrading' with a link to 'oanda.com: http://cmtrading.com' and a 'Scan Now' button. There are also 'History' and 'Delete' buttons. At the bottom, it says 'last: 5/12/2026, 3:26:51 PM - 1 snapshot(s)'.

Live view: Competitor Pricing Watcher

INPUTS

- Label, competitor name, product URL (or pick a competitor from the dropdown to auto-fill all 3)

OUTPUTS

- Latest scraped price
- Price-history chart per target

HOW TO USE IT

Add a target, then re-scan manually or wait for the cron job. Each target shows price-change deltas.

WHAT IT DOES

Monitors competitor hiring patterns to infer where they are investing strategic growth.

Why it matters: Best leading indicator of strategy shifts — when a competitor hires 10 SDRs you know they are about to attack a new segment.

Live view: Job Board Spy

INPUTS

- Competitor company names

OUTPUTS

- Open-role list
- Department breakdown
- Hiring-velocity signal

HOW TO USE IT

Add competitor names — InfoGenie searches public job boards and surfaces what each is hiring for.

WHAT IT DOES

Time-series share of media mentions across you and your competitors.

Why it matters: Use to prove (or disprove) marketing impact to the board — share-of-voice trend lines are the cleanest way to show category dominance.

Live view: Share of Voice Tracker

INPUTS

- Brand list (auto-derived from analysis)

OUTPUTS

- Stacked SoV chart
- Trend deltas

HOW TO USE IT

Open the tracker — it auto-runs daily and surfaces who is gaining or losing voice.

WHAT IT DOES

Daily anomaly detection on mention volume and sentiment to detect brand risks early.

Why it matters: Indispensable if your brand is consumer-facing — catch a PR fire in the first 30 minutes instead of finding out from the news.

The screenshot shows the InfoGenie Crisis Radar interface. At the top, there's a navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage' tabs. Below this, a blue header bar contains the 'Crisis Radar' title and a 'Run scan now' button. The main dashboard area features four key metrics: 'OPEN INCIDENTS' (10), 'TRACKED BRANDS' (1), 'TOTAL INCIDENTS (90D)' (10), and 'SLACK ALERTS' (10 sent). Below these is a 'Watchlist' section with a table showing 'Your brand' (Nike) and its competitors (Adidas, Puma) in the US, with 91 snapshots and 10 open incidents. The bottom section, 'Recent Incidents', lists several events, including negative sentiment surges for Nike and mention spikes, each with a severity score and an 'OPEN' status. Each incident entry includes a brief description, a sample quote, and a timestamp.

Live view: Crisis Radar

INPUTS

- Auto-monitored brands

OUTPUTS

- Anomaly alerts (Slack + email if configured)
- Severity scoring

HOW TO USE IT

Configure thresholds once, then leave it running. Crisis Radar pings you the moment volume or sentiment breaks pattern.

WHAT IT DOES

Builds detailed Ideal Customer Profiles using voice-of-customer signals.

Why it matters: Run this before every campaign launch — a sharp ICP halves wasted ad spend and dramatically improves the quality of inbound leads.

The screenshot shows the InfoGenie ICP Studio interface. At the top, there's a navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage' tabs. Below this, the 'ICP Studio — Ideal Customer Profile' section is highlighted. It includes a description: 'Build a detailed customer profile, mine voice-of-customer signals from Reddit & competitor data, then activate it across Creative, Social & Email.' A button 'Auto-Draft from Brand Intel' is visible. Below this, a status bar shows 'Brand: your brand · Industry: your industry · Reddit threads available: 0' and 'Competitors: 0'. The main section is divided into three parts: 1. 'ICP Builder' with fields for 'AGE RANGE' (e.g., 28-45), 'ROLE / STAGE' (e.g., Solo trader / SMB founder), 'INTENT STAGE' (e.g., Actively comparing alternatives), 'TOP 3 PAIN POINTS', 'TOP 3 DESIRES', and 'BUDGET BAND' (e.g., £500-£2,000/mo). A 'Save ICP' button is at the bottom. 2. 'Voice-of-Customer Mining' with a 'Mine My Data' button and three sub-sections: 'Top 5 Buying Triggers', 'Top 5 Objections', and 'Top 5 Emotional Drivers'. 3. 'Activation' with three options: 'Use as Creative Studio Target', 'Counter-Objection Caption Pack', and 'Email Sequence for Top Trigger'.

Live view: ICP Studio

INPUTS

- Brand intelligence data
- Optional manual prompts

OUTPUTS

- Persona profiles (demographics, pains, motivations)
- Tile-level activations: ads, social, email

HOW TO USE IT

Click any ICP tile to activate that channel. Use "Save ICP" to lock in the persona for future runs.

WHAT IT DOES

AI clusters recent mentions into themes — top complaints, top praises, feature requests, and unmet needs.

Why it matters: Best for finding your next product feature or marketing angle — your customers are already telling you what to build, this surfaces it.

Live view: Voice of Customer Mining

INPUTS

- Brand name (auto-pulled from analysis)

OUTPUTS

- Theme clusters with example quotes
- Sentiment per theme

HOW TO USE IT

Open VoC and let it run — it pulls a fresh sweep of mentions and rebuilds the themes each time.

Review Aggregator

ANALYSE

WHAT IT DOES

Pulls recent reviews from Trustpilot, G2, Google and other platforms into one analysis surface.

Why it matters: Use weekly to catch reputation drift early — one bad week of reviews silently tanks conversion long before you spot it in revenue.

The screenshot shows the InfoGenie web application interface. At the top, there's a dark navigation bar with the 'InfoGenie' logo on the left and several user and account icons on the right, including a 'Pro' badge, a bell icon, and buttons for 'Manual' and '+ Analyse'. Below the navigation bar is a secondary bar with tabs: 'Analyse' (active), 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header with the text 'COMPLETE · REVIEW AGGREGATOR' and a sub-header 'Review Aggregator'. Below this, a description states: 'Pull recent reviews from Trustpilot, G2, Google, Capterra, TripAdvisor — for your brand or to compare 2-4 competitors side-by-side.' The interface features two toggle buttons: 'Single Brand' (selected) and 'Compare 2-4 Brands'. Below these are two input fields: 'BRAND' with the placeholder text 'e.g. Stripe' and 'PLATFORM' with a dropdown menu currently showing 'Trustpilot'. At the bottom of this section is a yellow button labeled 'Scan Reviews'.

Live view: Review Aggregator

INPUTS

- Brand name + sources

OUTPUTS

- Unified review feed
- Average rating
- Theme breakdown

HOW TO USE IT

Add the brand, choose the sources, hit Aggregate.

WHAT IT DOES

Analyses competitor employee reviews to infer internal health, churn risk and culture problems.

Why it matters: A quiet tell on whether a rival is healthy or fragile — internal culture problems show up here months before they hit performance.

The screenshot shows the InfoGenie web application interface. At the top, there's a dark header with the 'InfoGenie' logo on the left and several user/subscription buttons (Pro, Manual, + Analyse) on the right. Below the header is a navigation bar with tabs: 'Analyse' (active), 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header section titled 'COMPETE GLASSDOOR SENTIMENT' with a sub-header 'Glassdoor Sentiment'. Below this, a description reads: 'Pull current employee reviews for any competitor — overall rating, CEO approval, top complaints, top praises and culture signals about strategy and management.' A search input field is labeled 'COMPANY *' with a placeholder 'e.g. Salesforce'. To the right of the input field is a green button labeled 'Scan Glassdoor'.

Live view: Glassdoor Sentiment

INPUTS

- Competitor company names

OUTPUTS

- Employee sentiment score
- Top complaint themes

HOW TO USE IT

Add a competitor — InfoGenie pulls public Glassdoor reviews and clusters the themes.

WHAT IT DOES

Tracks brand and competitor mentions across news and the open web.

Why it matters: Use to never miss a brand conversation — every blog post, news article and forum thread mentioning you in one searchable feed.

Live view: Mention Tracker

INPUTS

- Brand & competitor list

OUTPUTS

- Live mention feed
- Sentiment-tagged

HOW TO USE IT

Open Mentions and use the search box to filter by source, sentiment or date.

WHAT IT DOES

Deep dive into subreddit discussions for market research, sentiment and reply opportunities.

Why it matters: Best for B2C and prosumer brands — Reddit is where buyers actually research, and unanswered threads here are pure pipeline opportunity.

Live view: Reddit Intel

INPUTS

- Brand or query string
- Scan Now trigger

OUTPUTS

- Subreddit mentions with sentiment
- AI-suggested replies in your brand voice

HOW TO USE IT

Click "Scan now" and wait ~10 seconds. Use the Reply Studio tab to draft on-brand responses.

WHAT IT DOES

Searches subreddits for brand mentions from the last 7 days with AI sentiment classification.

Why it matters: Use weekly to see if your brand is gaining or losing traction in community discussion — sentiment movement here usually predicts review-site movement.

InfoGenie Pro Manual + Analyse

Reddit & Community Pulse

Search any subreddit for brand mentions or keywords from the last 7 days. AI sentiment classification batched via GPT-4o-mini.

Discover Questions Customers Ask

Enter what you sell — get the real questions strangers ask about it on Reddit right now. Perfect for blog topics, FAQ pages, and your next carousel.

What do you sell? e.g. "roof repair", "wedding photography" [Find Questions](#)

Scan Reddit

BRAND: e.g. Nike

SUBREDDITS (comma-sep, no r/): all

EXTRA KEYWORDS (optional, comma-sep): defaults to brand name

[Scan now](#)

Live view: Reddit & Community Pulse

INPUTS

- Brand name

OUTPUTS

- 7-day mention chart
- Top threads with reply hooks

HOW TO USE IT

Open Reddit Pulse — the 7-day window auto-refreshes when you click Scan.

WHAT IT DOES

Real-time monitoring of brand conversations and trending topics on X.

Why it matters: Best for live event marketing and crisis response — X is where breaking news, viral moments and customer complaints happen first.

The screenshot shows the InfoGenie Twitter/X Pulse interface. At the top, there's a navigation bar with 'InfoGenie' logo, a 'Pro' badge, and buttons for 'Manual' and '+ Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header with 'MONITOR · TWITTER/X PULSE' and 'Twitter/X Pulse'. Below this, it says 'Search X for brand mentions in the last 7 days with sentiment classification + viral-thread detection. No X API key needed.' There are two input fields: 'BRAND' with the example 'e.g. Tesla' and 'EXTRA KEYWORDS (optional, comma-sep)' with the example 'cybertruck, FSD, autopilot'. A 'Scan X' button is at the bottom left of the input area.

Live view: Twitter / X Pulse

INPUTS

- Brand handle or hashtag

OUTPUTS

- Tweet stream
- Sentiment + engagement scores

HOW TO USE IT

Type the handle and hit Search — results update live.

WHAT IT DOES

Extracts insights from Quora questions and answers in your category.

Why it matters: Use to find evergreen content ideas — every Quora question is a Google query someone is typing right now and not finding good answers for.

Live view: Quora Mining

INPUTS

- Topic or brand query

OUTPUTS

- Top questions
- Answer-gap opportunities

HOW TO USE IT

Search a topic and use the surfaced questions as content briefs.

WHAT IT DOES

Tracks competitor uploads, view velocity and comment sentiment via live YouTube search.

Why it matters: Best for tracking competitor video strategy — view-velocity tells you which uploads are working so you can copy the format, not the content.

The screenshot shows the InfoGenie YouTube Channel Monitor interface. At the top, there's a navigation bar with the InfoGenie logo, a 'Pro' badge, and buttons for 'Manual' and '+ Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage' options. The main content area has a blue header with 'MONITOR > YOUTUBE MONITOR' and a play button icon followed by 'YouTube Channel Monitor'. Below the header, it says 'Track competitor YouTube channels — recent uploads, view-velocity, comment sentiment. Real-time data via Perplexity (no Google API key needed).' A form titled 'Track a YouTube Channel' has three input fields: 'BRAND' (with 'e.g. Nike' as a placeholder), 'CHANNEL NAME' (with 'e.g. MrBeast' as a placeholder), and 'CHANNEL URL' (with 'https://www.youtube.com/@MrBeast' as a placeholder). A red 'Track' button is to the right of the URL field. Below the form, a message states 'No channels tracked yet. Add one above (e.g. https://www.youtube.com/@MrBeast).'

Live view: YouTube Channel Monitor

INPUTS

- Competitor channel names

OUTPUTS

- Recent uploads with view counts
- Comment-sentiment summary

HOW TO USE IT

Add channels — InfoGenie polls them and surfaces what is breaking out.

Podcast Mention Monitor

ANALYSE

WHAT IT DOES

Finds podcast episodes that mention your brand using live search.

Why it matters: Use for high-intent earned-media tracking — when a podcaster mentions you, their audience is the most pre-qualified traffic you will ever get.

The screenshot shows the InfoGenie Podcast Mention Monitor interface. At the top, there's a dark header with the InfoGenie logo on the left and several buttons (Pro, Manual, + Analyse) on the right. Below the header is a navigation bar with tabs: Analyse (selected), Create, Reach, Grow, and Manage. The main content area has a blue header with the title 'Podcast Mention Monitor' and a subtitle 'Find podcast episodes that mention your brand — host, show, sentiment, and direct episode link. Powered by Perplexity live search.' Below this is a search form with a 'Brand' input field containing 'Nike', 'Days back' and 'Max' dropdown menus set to '30' and '10' respectively, and a 'Scan' button.

Live view: Podcast Mention Monitor

INPUTS

- Brand name

OUTPUTS

- Episode list with show, host and timestamp

HOW TO USE IT

Run a scan — each result links straight to the episode.

WHAT IT DOES

Monitors competitor newsletter archives to extract subject lines, cadence and angles.

Why it matters: Best for stealing email angles that already convert — competitor subject lines are a free A/B test of what their audience opens.

The screenshot shows the InfoGenie Newsletter Tracker interface. At the top, there's a navigation bar with the InfoGenie logo, a 'Pro' badge, and several menu items: 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. Below this, a blue banner reads 'COMPETE · NEWSLETTER TRACKER' and 'Newsletter Tracker'. A sub-header explains: 'Monitor competitor newsletter archives. Add a Substack/Beehiiv/Mailchimp archive URL → AI extracts subject lines + cadence.' Below this is a form titled 'Track a Newsletter Archive' with three input fields: 'BRAND' (containing 'e.g. Stripe'), 'NEWSLETTER NAME' (containing 'e.g. Stripe Weekly'), and 'ARCHIVE URL (Substack/Beehiiv/Mailchimp/etc)' (containing 'https://example.substack.com/archive'). A purple 'Track' button is to the right. Below the form, a message states: 'No newsletters tracked yet. Add an archive URL above.'

Live view: Newsletter Tracker

INPUTS

- Competitor newsletter URL or name

OUTPUTS

- Subject-line list
- Send-frequency chart

HOW TO USE IT

Add a competitor newsletter — InfoGenie indexes their public archive.

Trending Topics

ANALYSE

WHAT IT DOES

Identifies what is currently spiking in your category via live web search.

Why it matters: Use before every content sprint — riding a trending topic in the first 48 hours can 10x your reach versus the same content a week late.

MONITOR / TRENDING TOPICS

Trending Topics

What's spiking in your category right now — powered by live web search via Perplexity.

What's hot in your category?

Category*
e.g. AI marketing, fintech, fitness apparel

Keywords (comma, optional)
growth, automation

Detect

Live view: Trending Topics

INPUTS

- Industry or category

OUTPUTS

- Ranked trending topic list
- Velocity scores

HOW TO USE IT

Pick the category — refreshed every few hours.

Content Gaps

ANALYSE

WHAT IT DOES

Identifies topics and keywords competitors are ranking for but you are not.

Why it matters: The single fastest way to grow organic traffic — every gap keyword is search intent your competitors monetise and you currently do not.

The screenshot shows the InfoGenie web application interface. At the top, there's a dark header with the 'InfoGenie' logo on the left and navigation links like 'Pro', 'Manual', and '+ Analyse' on the right. Below the header, a blue banner reads 'ANALYSE / CONTENT GAPS' and 'AI Content-Gap Ideation'. A sub-header explains: 'Reads sitemaps for your domain and your competitors, then asks AI to find the topics they cover that you don't — with a suggested angle for each gap.' Below this is a form with two input fields: 'YOUR DOMAIN' (containing 'example.com') and 'COMPETITOR DOMAINS' (showing 'No options available'). A purple 'Find gaps' button is to the right. At the bottom of the form area, a message says: 'Run an analysis on the home page first, or enter your domain and pick at least one competitor, then click Find gaps.'

Live view: Content Gaps

INPUTS

- Your domain + competitor domains

OUTPUTS

- Gap keyword list
- Suggested article briefs

HOW TO USE IT

Run the gap analysis — each result includes a brief you can hand to AI Content.

Search Intent Map

ANALYSE

WHAT IT DOES

Classifies keywords by user intent (Informational / Transactional / Commercial / Navigational).

Why it matters: Use to stop writing the wrong content for the wrong query — informational pages cannot rank for transactional intent and vice versa.

The screenshot shows the InfoGenie Search Intent Map interface. At the top, there's a navigation bar with 'InfoGenie' and several buttons: 'Pro', 'Manual', and '+ Analyse'. Below this, there's a 'Generate Intent Map' button. The main section is titled 'Search Intent Map' and contains a form for 'Intent Map Settings'. The form has three input fields: 'YOUR BRAND / DOMAIN' (containing 'your brand'), 'COMPETITORS (COMMA-SEPARATED)' (containing 'OANDA, Plus500, FXCM'), and 'KEYWORDS TO CLASSIFY (COMMA-SEPARATED - UP TO 40)' (containing 'forex trading, CFD broker reviews, best forex platform, open trading account, Plus500 vs OANDA'). Below the form, there's a 'Generate Intent Map' button. At the bottom, there's a message: 'Ready to map your search intent' followed by a paragraph explaining the process: 'Enter your keywords above and click **Generate Intent Map**. GPT-4o will classify each one into Informational, Commercial, Transactional or Navigational, recommend the right page type, and flag ones your competitors are exploiting.'

Live view: Search Intent Map

INPUTS

- Generate Intent Map trigger

OUTPUTS

- Keyword !' intent mapping
- Landing-page-type recommendations

HOW TO USE IT

Click "Generate" and use the resulting clusters to plan content type per topic.

WHAT IT DOES

Maps primary and supporting keywords to specific pages to avoid SEO cannibalisation.

Why it matters: Best for sites with 50+ pages — without an explicit map your own pages compete with each other and dilute rankings (cannibalisation).

InfoGenie

Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

ANALYSE > KEYWORD MAP

Keyword–Page Map

One primary keyword per page, supporting keywords mapped, and cannibalisation flagged before it costs you rankings.

Generate Map

- Keyword !' URL assignments

HOW TO USE IT

Click "Generate Map" — InfoGenie scans your site and assigns each keyword cluster to the best-fit page.

Keyword Explorer

ANALYSE

WHAT IT DOES

Detailed research tool for discovering new keyword opportunities with volume and difficulty metrics.

Why it matters: Use whenever you are scoping a new content series — pick the long-tail variants with low difficulty for the fastest path to ranked traffic.

Live view: Keyword Explorer

INPUTS

- Seed keyword + country

OUTPUTS

- Long-tail variants with metrics

HOW TO USE IT

Type a seed and let the explorer fan out related queries.

WHAT IT DOES

Live Google SERP tracker for any query, country and result type.

Why it matters: Best for understanding why you do or do not rank — see exactly which competitors, ads and answer-boxes are above you for any query.

Live view: Google Search Intelligence

INPUTS

- Search query
- Country
- Type (Organic / News)

OUTPUTS

- Live ranking positions
- Competitor ad presence
- Organic visibility

HOW TO USE IT

Type a query, choose a country, choose Organic or News, and hit Search.

SERP Position Tracker

ANALYSE

WHAT IT DOES

Tracks your domain's Google rank for target keywords across countries — over time.

Why it matters: Use this on your top 20 money-keywords — daily rank changes are the earliest warning that an algorithm update or a new rival is hurting you.

InfoGenie

Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

COMPETE · SERP POSITION TRACKER

SERP Position Tracker

Track your domain's Google search rank for any keyword across countries — see who's outranking you and how positions move over time.

Keyword: best running shoes Your domain: nike.com Country: US + Track

+ Scan All

KEYWORD	DOMAIN	COUNTRY	POSITION	LAST SCAN
running shoes	nike.com	US	#6	5/7/2026, 9:40:09 AM

Scan History

Live view: SERP Position Tracker

INPUTS

- Keyword list + country + your domain

OUTPUTS

- Daily rank chart
- Movement alerts

HOW TO USE IT

Add the keywords once; the tracker polls daily.

WHAT IT DOES

Total backlinks and referring-domain data for any domain.

Why it matters: Best for sizing the link gap before you invest in outreach — knowing a competitor has 5x your backlinks is what scopes a realistic catch-up plan.

Live view: Backlink Intel

INPUTS

- Target domain

OUTPUTS

- Referring-domain list
- Authority scores

HOW TO USE IT

Type a domain — useful for sizing competitor link profiles.

Backlink Monitor

ANALYSE

WHAT IT DOES

Continuous monitoring of backlink-profile changes and new link discoveries.

Why it matters: Use to protect hard-won links — a lost backlink can drop a ranking page out of the top 10 within 48 hours if you do not replace it.

The screenshot shows the 'Backlink Change Monitor' section of the InfoGenie dashboard. At the top, there's a navigation bar with 'InfoGenie' logo, a 'Pro' badge, and several menu items: 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. Below this, a blue header bar contains the title 'Backlink Change Monitor' and a brief description: 'Track new and lost backlinks on any domain. Daily snapshots from DataForSEO are diffed automatically — you get a Slack ping or email digest the moment a link disappears (so you can reach out and recover it) or a suspicious cluster of new low-quality links arrives (so you can disavow before it hurts rankings). Pairs with the Backlink Intel research view.' Below the header is a form titled 'Add a domain to monitor'. It includes three input fields: 'example.com' (placeholder), 'alerts@yourcompany.com (optional)', and 'Slack webhook URL (opti)'. There's also a 'Daily check' dropdown menu. Below the form are two buttons: 'Start Monitoring' (green) and 'Check All Now' (purple). At the bottom, a white box contains the text: 'No domains monitored yet. Add one above to start tracking link changes.'

Live view: Backlink Monitor

INPUTS

- Your domain

OUTPUTS

- New / lost link feed
- Change deltas

HOW TO USE IT

Set the watched domain once — alerts when links are gained or lost.

WHAT IT DOES

Your private library of saved competitor ads. Every result in Ad Library Spy gets a [Save](#) button so the angles, hooks and creative formats that already work in your category are one click away forever.

Why it matters: Best for brief days — open your swipe file and you start from proven hooks instead of a blank page; teams that swipe before they brief ship better creative faster.

INPUTS

- Click [Save](#) on any Ad Library Spy card
- Optional: 0-10 score, tags, free-text annotation per saved ad

OUTPUTS

- Searchable swipe-file gallery
- Filter by tag, advertiser or score
- De-duplicated (UNIQUE on source + external_id)

HOW TO USE IT

Run an Ad Library Spy search, click [Save](#) on every ad worth keeping. Open the Ad Swipe File any time you brief new creative — your team starts from proven references, not a blank page.

WHAT IT DOES

Pulls the real "People Also Ask" and "Related Searches" questions for any seed keyword, auto-groups them by wh-prefix (What / Why / How / When / Where / Who / Can / Is), and one-click promotes any question into your content calendar as a draft blog topic.

Why it matters: Use to build a year of content from one keyword — the real questions buyers type are the highest-intent topic prompts you will ever get for free.

INPUTS

- Seed keyword
- Target country
- Optional language

OUTPUTS

- Grouped question list
- "Add to Content Calendar" button per question
- Falls back to template questions when DataForSEO creds missing

HOW TO USE IT

Type the keyword you want to rank for, pick the country, hit Mine. Browse the grouped questions, click "+ Add to Calendar" on the ones worth writing — they appear as draft content items ready to be scheduled.

Create

Build and manage every marketing asset — copy, creative, video, scripts, calendars.

Brand Creative Library

CREATE

WHAT IT DOES

Centralised repository for all brand-related files (logos, banners, social, video, PDFs).

Why it matters: Use as your single source of truth — when copy and creative come from one tagged library, every campaign launches on-brand without back-and-forth.

Live view: Brand Creative Library

INPUTS

- File uploads up to 50MB (JPG/PNG/GIF/WebP/MP4/MOV/PDF/SVG)
- Category tags

OUTPUTS

- Searchable asset grid
- Filter by type

HOW TO USE IT

Drag and drop files into the Brand Assets uploader, then tag by category for fast retrieval.

WHAT IT DOES

Pre-built marketing and creative templates ready to clone and customise.

Why it matters: Best for cutting concept-to-launch time from days to minutes — start from a proven structure instead of a blank page on every brief.

Live view: Templates Library

INPUTS

- Filter by channel / format

OUTPUTS

- One-click clone into the relevant builder

HOW TO USE IT

Pick a template, click Use, then edit in place.

AI Creative Generation Engine

CREATE

WHAT IT DOES

Generates ad copy and headlines benchmarked against real competitor performance.

Why it matters: Use whenever you need 10 ad variants by tomorrow — the engine drafts copy benchmarked against ads that are already performing in your category.

Live view: AI Creative Generation Engine

INPUTS

- Competitor intel
- Generate More trigger

OUTPUTS

- Ad copy variants
- Headline options
- Campaign briefs

HOW TO USE IT

Pick the competitor and channel, then click Generate. Iterate until you hit the angle you want.

WHAT IT DOES

Data-driven ad creative builder that combines copy, image and call-to-action against tested patterns.

Why it matters: Best for paid social where creative fatigue kills ROAS — Smart Creative builds variants tuned to patterns that historically beat the average.

Live view: Smart Creative Builder

INPUTS

- Brand assets + product/offer context

OUTPUTS

- Multi-variant ad mockups ready for export

HOW TO USE IT

Open Smart Creative, pick the format, and step through the builder.

WHAT IT DOES

Creates multi-image carousel ads for social platforms automatically.

Why it matters: Use when you have a story that does not fit one image — multi-slide carousels consistently out-perform single-image posts on Meta and LinkedIn.

The screenshot shows the 'Viral Carousel Generator' interface within the InfoGenie application. The top navigation bar includes 'Analyse', 'Create' (active), 'Reach', 'Grow', and 'Manage'. The main content area is titled 'Viral Carousel Generator' and explains the tool's purpose: to generate 10-slide carousels for Instagram and LinkedIn using a proven framework. Below this, a section titled 'How to Make a Viral Carousel' lists four steps: 1. Hook, 2. Context, 3. Value, and 4. Action. The 'STEP 1 - TOPIC' section has a text input field with the example 'e.g. How small businesses can rank on Google in 2026'. The 'STEP 2 - STRUCTURE' section offers four templates: 'Pure Info' (Straight value, no fluff, just results.), 'Storytelling' (Take them on a journey. End with the lesson.), 'Problem-Solution' (Agitate, educate, and deliver the answer.), and 'Listicle' (List-based content always performs.). There are also optional fields for 'BRAND VOICE' (expert, plain-spoken, no jargon) and 'AUDIENCE' (small business owners and marketers). A large blue button labeled 'Generate 10-Slide Carousel' is positioned below these options. At the bottom, a 'RECENT CAROUSELS' section displays two previously generated carousels: 'How to win on Google in 2026' (Problem-Solution - 5/11/2026) and 'How small businesses can rank on Google in 2026' (Listicle - 5/11/2026), each with an 'Open' button.

Live view: Carousel Generator

INPUTS

- Topic + brand assets

OUTPUTS

- 5-10 slide carousel ready to publish

HOW TO USE IT

Type the topic, pick a style, and let it generate the slide deck.

WHAT IT DOES

Generates AI-based user-generated-content avatars for short video marketing.

Why it matters: Best for testing video angles without a film crew — produce 10 talking-head variants in an hour to see which message and tone wins.

Live view: AI UGC Avatars

INPUTS

- Script + avatar selection

OUTPUTS

- Talking-head video clip

HOW TO USE IT

Pick an avatar, paste a script, hit Generate — output downloads as MP4.

WHAT IT DOES

Generates high-quality AI speech for ads and video content.

Why it matters: Use for fast voiceover layers on social and ad creative — generate broadcast-quality narration without booking talent or a studio.

Live view: AI Voiceovers

INPUTS

- Script + voice + language

OUTPUTS

- Downloadable audio file

HOW TO USE IT

Paste text, pick a voice, hit Generate.

WHAT IT DOES

Specialised studio for creating, editing and tuning AI-generated voiceovers.

Why it matters: Best when broadcast quality matters — Studio gives you scene-by-scene control over pacing, emphasis and multi-take comparison before export.

The screenshot shows the InfoGenie Voiceover Studio interface. At the top, there's a navigation bar with the InfoGenie logo and several buttons: 'Pro', 'Manual', and '+ Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header with 'PLAN VOICEOVER' and a 'Voiceover' title. Below the title, a text box says 'Turn any script into studio-quality narration in one click. 6 voices, 2 quality tiers (standard / HD). Pairs with the Video Script Generator — paste a script, pick a voice, get an mp3.' The main form has a large text area for the script, labeled 'SCRIPT (max 4000 chars)' with a placeholder 'Paste your video script, ad copy, or any text you want narrated...'. Below the text area are three dropdown menus: 'VOICE' (set to 'Alloy (neutral)'), 'QUALITY' (set to 'Standard (fast & cheap)'), and 'LABEL (opt.)' (set to 'e.g. Q4 launch hero'). A 'Generate' button is on the right. A '0 chars' label is at the bottom left of the script area.

Live view: Voiceover Studio

INPUTS

- Script + voice/style controls

OUTPUTS

- Polished voiceover audio

HOW TO USE IT

Use Studio when you need finer control — pacing, emphasis, multi-take comparison.

WHAT IT DOES

Drafts scripts for video ads and content based on goal and audience.

Why it matters: Use before every video shoot — a structured hook-body-CTA script is the difference between a 3-second scroll and a 30-second watch.

The screenshot shows the 'Video Script Generator' tool within the InfoGenie dashboard. The interface is dark-themed with a blue header bar. The main content area has a blue header with the title 'Video Script Generator' and a subtitle: 'Generate short-form video scripts for TikTok, Reels, Shorts and LinkedIn. Each variant includes hook, body lines, on-screen text cues, B-roll directions, CTA and hashtags.' Below this is a form with the following fields: 'TOPIC / PRODUCT' (text input with placeholder 'e.g. "5 hidden features of our analytics dashboard"'), 'PLATFORM' (dropdown menu showing 'TikTok'), 'TONE' (dropdown menu showing 'Energetic'), 'DURATION (s)' (text input showing '30'), and 'VARIANTS' (text input showing '3'). A pink 'Generate Scripts' button is located at the bottom left of the form.

Live view: Video Script Generator

INPUTS

- Topic + goal + length

OUTPUTS

- Hook, body and CTA-structured script

HOW TO USE IT

Pick the goal (awareness / conversion), enter the topic, and refine.

WHAT IT DOES

General AI tool for generating marketing copy and articles.

Why it matters: Best for getting a publishable first draft fast — pair the AI output with one human edit pass for the quality bar your readers expect.

Live view: Content AI

INPUTS

- Topic + brief + tone

OUTPUTS

- SEO-aware article draft

HOW TO USE IT

Use the brief field to be specific — better briefs produce far better content.

Headline & Hook Tester

CREATE

WHAT IT DOES

Scores headlines across virality patterns and provides alternate variants.

Why it matters: Use on every blog post and ad — a 20% lift in headline quality compounds into 20% more clicks on every piece of content you ship.

The screenshot shows the InfoGenie web application interface. At the top, there's a navigation bar with the InfoGenie logo, a 'Pro' badge, and several menu items: 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. Below this, a blue banner reads 'PLAN HEADLINE TESTER' and 'Headline & Hook Tester', with a subtext: 'Score any headline 0-100 across virality patterns + get up to 10 alternate variants ranked by predicted performance.' The main form area is titled 'Test a Headline' and contains three input fields: 'HEADLINE' (with the example 'e.g. "Stop wasting ad budget — automate it"'), 'AUDIENCE' (with the example 'e.g. SaaS founders, Series A-B'), and 'CHANNEL' (a dropdown menu showing 'Landing page'). To the right of the 'CHANNEL' dropdown is a 'VARIANTS' input field with the value '8'. A red button labeled 'Score + Generate Variants' is positioned below the input fields.

Live view: Headline & Hook Tester

INPUTS

- Original headline

OUTPUTS

- Score + reasoning + 5 alternative headlines

HOW TO USE IT

Paste a headline and review the alternatives before publishing.

WHAT IT DOES

Drafts AP-style press releases for launches and crisis responses.

Why it matters: Best for product launches, fundraising and crisis responses — a wire-ready release written in minutes, not the half-day a freelancer would take.

The screenshot shows the InfoGenie AI Press Release Generator interface. At the top, there's a navigation bar with 'InfoGenie' logo and buttons for 'Pro', 'Manual', and '+ Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header with 'PLAN · PRESS RELEASES' and 'AI Press Release Generator'. Below this, a subtitle reads: 'Draft AP-style press releases for crisis response, product launches, milestones, partnerships and competitor counter-positioning. Pull context from any Crisis Incident or Battle Card.' The form itself has several fields: 'Brand' (Nike), 'Type' (Crisis Response), 'Spokesperson (optional)' (e.g. Jane Doe, CEO), 'Headline hint (optional)' (e.g. emphasise innovation), and 'Context (what's the news?)' (Describe the situation, news, or angle the release should cover. Be specific — facts, dates, numbers.). A pink 'Generate Press Release' button is at the bottom.

Live view: AI Press Release Generator

INPUTS

- Topic + key facts + quote

OUTPUTS

- Wire-ready press release

HOW TO USE IT

Fill the brief — InfoGenie produces the AP-formatted release.

WHAT IT DOES

Drafts multi-step cold outreach sequences tailored to specific prospects.

Why it matters: Use to scale outbound without losing personalisation — multi-step cadences cover the prospects who never reply on email one alone (which is most of them).

The screenshot shows the InfoGenie AI Cold Email Writer interface. At the top, there's a navigation bar with 'InfoGenie' logo, a 'Pro' badge, and buttons for 'Manual', 'Manual', and '+ Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The main content area has a blue header with 'REACH > COLD EMAIL WRITER' and 'AI Cold Email Writer'. Below this, a description states: 'Drafts a multi-step cold outreach sequence — opener, follow-ups, and breakup — tailored to one prospect's role, company, and pain point.' The form contains several input fields: 'Your brand' (e.g. InfoGenie), 'Your name' (e.g. Paul), 'What you sell / offer' (One sentence about your product and the outcome it delivers.), 'Target company (optional)' (e.g. Nike), 'Target role' (e.g. Head of Growth), 'Their pain / trigger event' (What problem they're hitting right now, or a recent trigger (funding round, hire, product launch).), 'Tone' (direct), and 'Sequence steps' (3 steps). A red 'Draft Sequence' button is at the bottom right.

Live view: AI Cold Email Writer

INPUTS

- Prospect / persona + offer

OUTPUTS

- 3-5 email cadence ready to copy

HOW TO USE IT

Describe the prospect; the writer builds the full sequence.

AI Sales Email Personalizer

CREATE

WHAT IT DOES

Personalises base templates with research from each lead's company website.

Why it matters: Best for SDR teams burning out on manual research — auto-personalisation lifts reply rates roughly 3x without adding headcount.

The screenshot shows the InfoGenie web application interface. At the top, there's a navigation bar with the InfoGenie logo, a 'Pro' badge, and buttons for 'Manual' and 'Analyse'. Below this is a secondary navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage' tabs. The 'Create' tab is active. The main content area is titled 'EMAIL PERSONALIZER' and features a sub-header 'AI Sales Email Personalizer'. A descriptive text explains the tool's function: 'Take a base cold-email template, paste your leads, and get one personalized email per lead — with real research from each lead's company website (Firecrawl + GPT-4o-mini). Pulls leads automatically from B2B Lead Finder.' The interface is divided into two main sections. The first section, 'Base Template', contains a text area with a placeholder email template: 'Hi [FIRST_NAME], I noticed [COMPANY] is doing X — wanted to ask about Y. Worth 15 min?'. Below this, it lists supported tokens: [NAME], [FIRST_NAME], [COMPANY], [ROLE], [WEBSITE], and states that AI will replace and personalize using each lead's website. There's a 'TONE' dropdown menu set to 'professional, warm, specific' and a checkbox for 'Use website research (Firecrawl)' which is checked. The second section, 'Leads (one per line, JSON)', contains a text area with a JSON example: '{\"name\": \"Jane Doe\", \"role\": \"VP Marketing\", \"company\": \"Acme Corp\", \"website\": \"acme.com\"}'. A note below states 'Each line = one lead JSON. Max 25 per batch.' At the bottom of this section is a 'Personalize All' button. On the right side of the 'Base Template' section, there are two buttons: 'Pull leads from B2B Lead Finder' and 'Load sample'.

Live view: AI Sales Email Personalizer

INPUTS

- Base template + lead URL

OUTPUTS

- Personalised email per lead

HOW TO USE IT

Drop in a template and a lead URL — output is personalised in seconds.

Reply Assistant

CREATE

WHAT IT DOES

Identifies unanswered mentions and drafts AI replies in your brand tone.

Why it matters: Use when your unanswered-mention pile is growing — drafted replies in your tone mean the team approves instead of writing from scratch.

Live view: Reply Assistant

INPUTS

- Saved brand persona (from ICP Studio)

OUTPUTS

- On-brand reply drafts ready to post

HOW TO USE IT

Set up a persona once, then approve or edit each suggested reply.

WHAT IT DOES

Build and deploy AI-powered chatbots embedded on your site.

Why it matters: Best for sites where the same questions cost you sales every day — an embedded bot answers them at 2am and books demos while you sleep.

InfoGenie

Pro Manual + Analyse

Analyse Create Reach Grow Manage

REACH > CHATBOT BUILDER

Chatbot Builder

Generate a website FAQ chatbot — greeting, 8-15 Q&A entries, fallback handler, lead-capture form and a copy-pasteable embed snippet — all from a one-line description.

BRAND NAME* e.g. Acme Inc

AUDIENCE e.g. small-business owners

PRODUCT / SERVICE DESCRIPTION e.g. We sell AI-powered marketing intelligence software starting at \$99/month. Self-serve signup, 14-day free trial. Integrates with HubSpot and Salesforce.

TONE Friendly

ACCENT COLOR

Generate Chatbot

Live view: Chatbot Builder

INPUTS

- Knowledge base + tone + handoff rules

OUTPUTS

- Embeddable chat widget

HOW TO USE IT

Step through the builder, then paste the embed snippet on your site.

Localization (40+ languages)

CREATE

WHAT IT DOES

Translates and adapts marketing content for over 40 languages — preserving brand voice.

Why it matters: Use before any market expansion — a literal translation will lose every customer; cultural adaptation is what makes copy actually convert.

Live view: Localization (40+ languages)

INPUTS

- Source text + target language

OUTPUTS

- Localised, culturally-adapted copy

HOW TO USE IT

Paste copy, pick the language, hit Translate.

WHAT IT DOES

Generates full HTML landing pages including hero, features, FAQ and CTA from a brief.

Why it matters: Best when paid traffic is waiting for a page — a purpose-built landing page typically converts 2-5x better than sending traffic to your homepage.

Live view: AI Landing Page Builder

INPUTS

- Product / offer brief

OUTPUTS

- Hosted landing page + downloadable HTML

HOW TO USE IT

Fill the brief, pick a style, click Build — the page deploys automatically.

WHAT IT DOES

Creates JSON-LD schema markup to improve search visibility and rich-result eligibility.

Why it matters: Use to qualify for rich results and AI citations — search engines and LLMs both rely on schema to know what your page is actually about.

Live view: Schema Generator

INPUTS

- Page type + entity details

OUTPUTS

- Copy-paste JSON-LD block

HOW TO USE IT

Pick the schema type and fill the fields — the markup is generated immediately.

WHAT IT DOES

AI-generated campaign improvements and structural recommendations with one-click launch.

Why it matters: Best for closing the gap between insight and action — every recommendation has a one-click launch so no good idea dies in a Slack thread.

Live view: Campaign Intelligence

INPUTS

- Launch modal: budget, platform, region

OUTPUTS

- Automated deployment to Google, Meta, TikTok

HOW TO USE IT

Click Launch Campaign on any recommendation to push the campaign live to your connected ad accounts.

WHAT IT DOES

End-to-end social media management — generate posts, schedule, and visualise.

Why it matters: Use as your content command center — visualising every channel on one calendar is what catches gaps and double-posts before they go live.

Live view: Social Calendar & Generator

INPUTS

- Create Post trigger (text/images)

OUTPUTS

- Visual calendar
- Scheduled posts across platforms

HOW TO USE IT

Use Create Post to draft content, set a publish time, and approve. Posts appear in the Master Calendar.

Content Calendar Auto-Pilot

CREATE

WHAT IT DOES

Generates a multi-channel content calendar with hooks, copy and timing — for any window you pick.

Why it matters: Best for solo marketers and small teams — auto-pilot eliminates the weekly "what should we post?" meeting and keeps cadence consistent.

The screenshot shows the InfoGenie web application interface. At the top, there's a navigation bar with the InfoGenie logo, a 'Pro' badge, and buttons for 'Manual' and '+ Analyse'. Below this is a secondary navigation bar with tabs for 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The 'Create' tab is active. The main content area has a blue header with the title 'Content Calendar Auto-Pilot' and a subtitle 'Generate a fully-fleshed multi-channel content calendar in seconds — hook, copy, hashtags, CTA and best time per post.' Below this is a form with several input fields: 'Brand' (Nike), 'Goal' (e.g. drive 10% more sign-ups), 'Days' (7), 'Audience' (e.g. urban athletes 18-34), and 'Tone' (e.g. bold + motivational). There's also a 'Channels' section with checkboxes for Instagram, TikTok, LinkedIn, X, Facebook, YouTube, Blog, and Email. A green 'Generate Calendar' button is at the bottom of the form.

Live view: Content Calendar Auto-Pilot

INPUTS

- Window (week / month / quarter) + channels

OUTPUTS

- Pre-populated calendar ready to schedule

HOW TO USE IT

Pick the window and channels, click Generate, then approve or edit each entry.

WHAT IT DOES

Single workspace bundling brand identity, AI image tools, video clips, slide decks, and email signatures — everything you need to ship a campaign without a designer.

Why it matters: Use whenever you need a one-off asset (logo refresh, hero image, demo video, deck, signature) without opening a separate design tool.

Live view: Creator Studio (all-in-one)

INPUTS

- Brand prompt or uploaded logo
- Reference photo or empty canvas
- Slide / signature topic

OUTPUTS

- Brand kit (logo, palette, fonts)
- Generated/edited images & video
- Slide deck PDF
- HTML email signature

HOW TO USE IT

Open Studio, pick a tile (Brand · Image · Video · Slides · Signature), fill the short form and click Generate. Outputs save to your asset library and can be reused in any campaign.

WHAT IT DOES

Two-way WhatsApp messaging through Meta's Cloud API — send templates or free-form replies, receive inbound messages straight into the unified inbox.

Why it matters: Best for markets where WhatsApp is the default channel — open rates beat email by 4-5x and inbound replies land in the same inbox.

Live view: WhatsApp Channel

INPUTS

- WhatsApp phone-number ID + access token (Settings)
- Recipient number
- Template name or text body

OUTPUTS

- Sent message status
- Inbound message thread in inbox
- Per-conversation history

HOW TO USE IT

Connect your Meta WhatsApp Business number in Settings. Pick a recipient, choose a template (or type a free-form reply within the 24h window), and send. Replies arrive in your unified inbox automatically.

WHAT IT DOES

Outbound AI phone calls via Vapi.ai — your AI agent dials the prospect, runs a scripted conversation, and logs the transcript + outcome.

Why it matters: Use to qualify warm inbound leads at 3am — your AI agent dials, runs the script, and books the meeting while you sleep.

Live view: AI Voice Caller

INPUTS

- Vapi API key + phone-number ID (Settings)
- Recipient phone
- Call script / objective

OUTPUTS

- Live call status
- Full transcript
- Outcome label (booked / not interested / callback)

HOW TO USE IT

Drop the prospect number, paste your script (or use a template), click Call. Watch the live status; the transcript and outcome land in the calls table when the call ends.

WHAT IT DOES

Block-based landing-page builder — assemble hero, features, testimonials, FAQ, CTA blocks into a public page hosted at `/lp/:slug`.

Why it matters: Best for one-off campaign pages — spin up a public landing page in minutes without waiting on a developer or theme designer.

Live view: Site Builder (multi-page)

INPUTS

- Page slug + title
- Block selection + per-block content
- Optional brand kit overlay

OUTPUTS

- Published landing page at a public URL
- Form submissions routed to your inbox / HubSpot

HOW TO USE IT

Click "+ New Page", give it a slug, drag in the blocks you want, fill the copy, then Publish. Share the `/lp/:slug` URL anywhere.

WHAT IT DOES

Linktree-style bio page with built-in Stripe checkout — list links, products and digital goods at `/bio/:slug`. Buyers pay without leaving the page.

Why it matters: Use the moment you have something to sell on social — bio link + checkout in one URL means you can monetise a TikTok view without a separate store.

Live view: Link-in-Bio + Stripe

INPUTS

- Bio slug + avatar + headline
- Link list (label + URL)
- Product list (name + price + Stripe price ID)

OUTPUTS

- Public bio page
- Stripe checkout sessions
- Order confirmations via Resend

HOW TO USE IT

Pick a slug, add your links and products (with Stripe price IDs from your Stripe dashboard), then publish. Share `/bio/:slug` — buyers click a product, complete Stripe checkout, and receive a confirmation email automatically.

WHAT IT DOES

A one-page brand identity store — Purpose · ICP · Voice · Messaging · Visual — that is auto-injected as a system-prompt prefix into the top 5 AI generators (landing pages, social posts, cold email, video scripts, Creator Studio). Save once, every downstream AI tool stays on-brand without you re-typing the guidelines.

Why it matters: Set this once on day one — every AI generator across the platform inherits your voice automatically, so nothing ever lands sounding generic again.

INPUTS

- Brand purpose statement
- ICP description
- Voice guidelines (do / don't / banned words)
- Messaging pillars
- Visual / colour notes

OUTPUTS

- Singleton brand_foundation row
- Auto-injected context across 5+ AI generators
- Voice Check tool (0-100 score + flagged words + rewrite)

HOW TO USE IT

Fill in Brand Foundation once at setup. From that moment, every AI-generated landing page, social post, email and video script speaks in your voice. Use the Voice Check tool to score any copy against the saved guidelines.

WHAT IT DOES

Three-button workflow on every AI storyboard: render the key-frames as SDXL images, generate a voice-over MP3 with OpenAI TTS, then stitch frames + voice-over into a single 1280×720 MP4.

Replaces Pictory / RunwayML for short-form ad and social use.

Why it matters: Best for social and ads where you need 5 videos a week — three clicks produce a broadcast-ready MP4 without booking a shoot, an editor or an animator.

INPUTS

- Existing storyboard (from Creator Studio)
- Voice-over script (auto-pulled from storyboard or manual)
- Voice & pace

OUTPUTS

- Per-scene key-frame images
- Voice-over MP3
- Final 1280×720 MP4 ready to upload

HOW TO USE IT

Open any storyboard in Creator Studio, click Render Frames !' Generate Voice-Over !' Render MP4 in order. The finished MP4 is downloaded straight to your machine.

Reach

Distribute content and ads to target audiences across every channel that matters.

31

TOOLS

- Audience Intelligence

- GEO Audit (AI Engines)
- SEO On-Page Auditor
- Site SEO Crawler
- SEO Task Manager
- Local SEO Basics
- Web Vitals Auditor
- Social Tags Audit
- Email Deliverability Auditor
- Embeddable Audit Widget

WHAT IT DOES

Identifies and targets high-converting audience segments.

Why it matters: Use as the first step before any paid campaign — wrong audience is the #1 reason ad budgets get burned without producing pipeline.

Live view: Audience Intelligence

INPUTS

- Auto-Target trigger

OUTPUTS

- Defined audience segments
- Targeting parameters for ad platforms

HOW TO USE IT

Click Auto-Target to let InfoGenie build your top 5 segments automatically. Push them straight to Meta, Google, or TikTok.

WHAT IT DOES

Creates new audience segments that mirror your best customers or competitor targets.

Why it matters: Best for scaling what already works — lookalikes consistently out-perform broad targeting once your seed audience exceeds about 1,000 customers.

Live view: Lookalike Audiences

INPUTS

- Seed audience or customer list

OUTPUTS

- Lookalike segment ready for paid platforms

HOW TO USE IT

Pick a seed, choose the similarity tier, push to your ad account.

WHAT IT DOES

Searches a database of 275M+ contacts for prospects matching your ICP.

Why it matters: Best for filling pipeline this quarter — pull a clean list matching your ICP in minutes instead of paying a list broker by the row.

InfoGenie

Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

REACH · B2B LEAD FINDER

B2B Lead Finder

Search Apollo's 275M+ contact database for prospects matching your ICP — by job title, seniority, location, industry, and company size.

Job titles (comma-sep)
VP Marketing, Head of Growth, CMO

Seniorities
c suite
vp
director

Locations (comma-sep)
United States, United Kingdom

Company size
min max

Powered by Apollo.io · 275M+ B2B contacts · per request: 10 leads

Find Leads

Live view: B2B Lead Finder

INPUTS

- Filters: industry, role, company size, geography

OUTPUTS

- Contact list with email + LinkedIn

HOW TO USE IT

Set the filters, run the search, push selected leads to HubSpot.

Lead Qualifier

REACH

WHAT IT DOES

Automatically scores leads on firmographic and intent signals.

Why it matters: Use before every sales handoff — automated BANT scoring stops AEs wasting hours on leads that were never going to close.

Live view: Lead Qualifier

INPUTS

- Lead list (from CRM or Lead Finder)

OUTPUTS

- BANT-style score per lead

HOW TO USE IT

Run the qualifier — leads move into hot / warm / cold buckets automatically.

WHAT IT DOES

Pushes leads, influencers and dynamic audiences from InfoGenie directly into your HubSpot CRM.

Why it matters: Best for keeping the rest of your stack in sync — every audience and lead found in InfoGenie should land in HubSpot the same hour.

REACH > HUBSPOT SYNC

HubSpot Sync

Push leads from B2B Lead Finder + influencers from your CRM straight into HubSpot. Auto-dedups by email, supports bulk upsert (50/batch), and sees recent contacts at a glance.

HubSpot CRM
Push prospects + influencers as contacts. Auto-dedups by email, syncs lifecycle stage = lead. [Test connection](#)

Sync from Lead Finder
Run a B2B Lead Finder search first, then click below to push the most recent run into HubSpot.
[→ Push last lead-finder run](#)

Push single contact

Full name email@company.com
Job title Company
[→ Push to HubSpot](#)

[Refresh](#)

Name	Email	Title	Company	Stage	Created
Brian Halligan (Sample Contact)	bh@hubspot.com	Executive Chairperson	HubSpot	lead	4/29/2026
Maria Johnson (Sample Contact)	emailmaria@hubspot.com	Salesperson	HubSpot	lead	4/29/2026

Live view: HubSpot Sync

INPUTS

- HubSpot private app token (Settings)

OUTPUTS

- Synced contacts + lists in HubSpot

HOW TO USE IT

Connect HubSpot once in Settings — sync runs on demand or on a schedule.

WHAT IT DOES

Management interface for lead-generation ads across 20+ channels.

Why it matters: Use as your one console for paid media — managing 20 platforms in 20 tabs is how budget overruns and tracking gaps happen.

Live view: Multi-Channel Advertising Hub

INPUTS

- New Campaign trigger
- Platform connections

OUTPUTS

- Integrated campaign management
- Cross-platform performance tracking

HOW TO USE IT

Connect your ad accounts in Settings, then use New Campaign to launch coordinated buys across selected platforms.

Import Campaigns

REACH

WHAT IT DOES

Connect and sync existing ad campaigns from external platforms into InfoGenie's optimiser.

Why it matters: Best when you already run paid ads elsewhere — pull the existing tree in once and the AI optimiser starts learning from day one.

Live view: Import Campaigns

INPUTS

- Platform credentials

OUTPUTS

- Imported campaigns visible under Tracked Campaigns

HOW TO USE IT

Click Import after connecting a platform — InfoGenie pulls the campaign tree.

Optimization Folders

REACH

WHAT IT DOES

Organise campaigns into logical groups for bulk AI optimisation.

Why it matters: Use for portfolios with 50+ campaigns — folder-level rules apply optimisations across grouped campaigns instead of one at a time.

Live view: Optimization Folders

INPUTS

- Folder name + campaign assignments

OUTPUTS

- Folder-level optimisation rules

HOW TO USE IT

Create a folder, assign campaigns, then attach optimisation rules at the folder level.

WHAT IT DOES

Directly publishes content to connected social accounts.

Why it matters: Best for teams scheduling daily — bulk publish to all your channels at once instead of manually copying the same post 6 times.

InfoGenie Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

Social Publisher

Post & schedule across 15 social platforms (Twitter/X, Instagram, Facebook, LinkedIn, TikTok, YouTube, Pinterest, Reddit, Bluesky, Threads, Google Business, Telegram, Snapchat, WhatsApp, Discord) — one click from any AI draft you've generated. Powered by Zernio.

- Post content + platform + schedule

OUTPUTS

- Published or scheduled posts

HOW TO USE IT

Compose, pick the platforms, schedule or publish.

WHAT IT DOES

Creates scientifically angled test variants with predicted lift before you run them.

Why it matters: Use before every test — knowing the predicted lift and required sample size up-front stops you killing tests too early or too late.

InfoGenie

Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

PLAN A/B TEST DESIGNER

AI A/B Test Designer

Drop in any subject line, ad headline, CTA or hero copy and get scientifically-angled variants with a hypothesis, primary metric, predicted lift, and recommended split.

Brand (optional)
e.g. Nike

Goal
e.g. drive 10% more click-throughs

Audience
e.g. lapsed customers, 30-50

Element type
Email subject line

Variants
4

Original copy (control)
Paste the existing subject line, headline, CTA, etc.

Design Variants

Live view: AI A/B Test Designer

INPUTS

- Hypothesis + control element

OUTPUTS

- Variant set with predicted lift + sample-size guidance

HOW TO USE IT

Describe the hypothesis — InfoGenie produces variants and tells you how long to run.

WHAT IT DOES

Drop-in widgets and patterns designed to lift on-page conversion rates.

Why it matters: Best for sites with traffic but soft conversion — drop-in widgets like exit intent and social proof typically lift CR by 10-20% in a week.

Live view: Conversion Boosters

INPUTS

- Page type + goal

OUTPUTS

- Embeddable booster snippets

HOW TO USE IT

Pick a booster, paste the snippet, monitor lift in CRO Lab.

WHAT IT DOES

Finds active creators in any niche via live web search.

Why it matters: Use whenever you scope an influencer campaign — a fresh creator search beats reusing the same 10 names every brand in your category already worked with.

Live view: Influencer Discovery

INPUTS

- Niche + region + platform

OUTPUTS

- Creator list with handles, audience size, engagement

HOW TO USE IT

Search a niche — push promising creators to the CRM with one click.

WHAT IT DOES

Pipeline tracker for creator partnerships, outreach and deal management.

Why it matters: Best for managing 5+ creator partnerships at once — a kanban pipeline stops promising creators going cold while you remember to follow up.

Live view: Influencer CRM

INPUTS

- Creator records + status changes

OUTPUTS

- Kanban-style pipeline

HOW TO USE IT

Move creators through your pipeline; sync to HubSpot if needed.

WHAT IT DOES

Monitors brand presence in AI engines like ChatGPT, Claude and Perplexity.

Why it matters: Use as your AI-era SEO health check — the queries people now ask ChatGPT and Perplexity are not the same as Google, and you must rank in both.

InfoGenie

Pro Manual Manual + Analyse

Run now History

Live view: Search & AI Visibility

INPUTS

- Brand + tracked prompts

OUTPUTS

- Citation tracking
- Sentiment per engine

HOW TO USE IT

Add the prompts you care about — InfoGenie polls the AI engines and flags drift.

WHAT IT DOES

Audits how AI engines respond to brand queries in specific geographies.

Why it matters: Best for international brands — AI engines answer the same prompt very differently per country, and only an audit reveals where you are invisible.

Live view: GEO Audit (AI Engines)

INPUTS

- Brand + region + prompt set

OUTPUTS

- Per-engine response transcript + citation analysis

HOW TO USE IT

Pick the region and prompts, hit Audit, then export the report.

WHAT IT DOES

Analyses individual pages for SEO best practice and technical issues.

Why it matters: Use on every important landing page — most SEO mistakes are mechanical (missing tags, broken meta) and the auditor flags them all in one pass.

Live view: SEO On-Page Auditor

INPUTS

- Page URL

OUTPUTS

- Pass/fail checklist + fix suggestions

HOW TO USE IT

Paste a URL — every issue includes a recommended fix.

WHAT IT DOES

Crawls entire websites to surface hidden SEO problems.

Why it matters: Best for sites with 100+ URLs — a full crawl finds the silent issues (orphan pages, broken redirects) you would never notice manually.

Live view: Site SEO Crawler

INPUTS

- Root domain + crawl depth

OUTPUTS

- Per-page issue report
- Site-wide health grade

HOW TO USE IT

Start the crawl — issues are grouped by severity for triage.

WHAT IT DOES

Organises and tracks SEO improvements and technical fixes as a Kanban board.

Why it matters: Use to turn audit findings into actual fixes — a kanban board keeps SEO work moving instead of dying in a forgotten spreadsheet.

Live view: SEO Task Manager

INPUTS

- Tasks created from auditor / crawler

OUTPUTS

- Status-tracked task list

HOW TO USE IT

Move tasks across columns as they're completed.

WHAT IT DOES

Essential tools for managing local business listings and local search presence.

Why it matters: Best for any business with a physical location — local pack rankings drive 70%+ of foot traffic, and listings drift out of date fast.

InfoGenie

Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

REACH > LOCAL SEO BASICS

Local SEO Basics

For brick-and-mortar and service-area businesses. Checks NAP visibility, LocalBusiness schema, Google Business Profile link, embedded map, opening hours, click-to-call, contact page and service-area signals — the must-haves for local-pack and Maps rankings.

Run a Local SEO audit

Page URL (homepage or contact page works best)

[Audit page](#)

☐ Render with real browser (slower, but works for SPA / JavaScript-heavy sites)

For brick-and-mortar and service-area businesses. 11 checks summing to 100 points covering NAP, schema, GBP link, hours, click-to-call and more.

Recent audits

F	https://example.com	Score 17 · 5/11/2026, 12:00:39 PM
F	https://example.com	Score 17 · 5/11/2026, 11:53:05 AM
F	https://example.com	Score 17 · 5/11/2026, 11:51:04 AM

Live view: Local SEO Basics

INPUTS

- Business name + address + categories

OUTPUTS

- Listing-health checklist

HOW TO USE IT

Fill the business profile and review the listings checklist.

WHAT IT DOES

Audits Core Web Vitals and Lighthouse scores for any URL.

Why it matters: Use whenever conversion or rankings drop unexplained — Core Web Vitals failures silently hurt both user experience and Google rankings.

Live view: Web Vitals Auditor

INPUTS

- Page URL

OUTPUTS

- CWV report + Lighthouse breakdown

HOW TO USE IT

Paste a URL and run — fix the items flagged red first.

WHAT IT DOES

Checks Open Graph and Twitter card tags for proper social sharing.

Why it matters: Best to run before any major launch — broken Open Graph tags make every shared link on Facebook/LinkedIn look ugly and tank click-through.

InfoGenie

Pro Manual Manual + Analyse

Analyse Create Reach Grow Manage

REACH · SOCIAL TAGS AUDIT

Social Tags Audit

Audits Open Graph (Facebook/LinkedIn previews), Twitter Cards (X previews), Facebook Pixel, GA4, social profile links, favicon and Apple touch icon. Catches the "why does my link look ugly when shared?" problems instantly.

Audit social tags & tracking

Page URL

☐ Render with real browser (slower, but works for SPA / JavaScript-heavy sites)

13 checks for Open Graph, Twitter Cards, Facebook Pixel, GA4, social profile links, favicon and Apple touch icon.

Live view: Social Tags Audit

INPUTS

- Page URL

OUTPUTS

- Tag-by-tag pass/fail with the actual values

HOW TO USE IT

Paste the URL — fix any missing tags before sharing widely.

Email Deliverability Auditor

REACH

WHAT IT DOES

Performs DNS lookups for SPF, DKIM and DMARC to ensure email delivery.

Why it matters: Use the day you set up a new sending domain — without correct SPF/DKIM/DMARC every cold email lands in spam and your sender reputation collapses.

Live view: Email Deliverability Auditor

INPUTS

- Sending domain

OUTPUTS

- SPF / DKIM / DMARC status + fix suggestions

HOW TO USE IT

Paste the domain — copy any missing DNS records straight from the result.

WHAT IT DOES

A lead-capture widget that provides SEO audits to your site visitors.

Why it matters: Best for service businesses needing inbound leads — the embed gives prospects a useful audit and gives you their email address in return.

Live view: Embeddable Audit Widget

INPUTS

- Branding + lead-capture fields

OUTPUTS

- Embed snippet for your site

HOW TO USE IT

Configure the widget, paste the snippet, harvest the leads.

Unified Inbox

REACH

WHAT IT DOES

Aggregates messages and mentions from multiple channels into one inbox.

Why it matters: Use to stop messages slipping through the cracks — when 8 channels feed one inbox, response time drops and customer satisfaction goes up.

Live view: Unified Inbox

INPUTS

- Connected channels

OUTPUTS

- Single threaded inbox

HOW TO USE IT

Connect your channels — every conversation lands here.

WHAT IT DOES

Routes crisis, share-of-voice and digest alerts to Slack and email based on rules.

Why it matters: Best for teams of 3+ — routing rules ensure the right person is paged for the right alert instead of everyone ignoring a noisy channel.

MONITOR · ALERT ROUTING

Smart Alert Routing

Build rules that route Crisis incidents, SoV drops and digest alerts to Slack and email. Filter by brand, severity, kind. Test-fire any rule with one click.

[+ New Rule](#)

Rule	Test	Edit	Delete

[] slack	
High-sev Nike crisis to Slack · crisis_incident	5/7/2026, 8:32:26 AM
[] slack	

Live view: Smart Alert Routing

INPUTS

- Slack webhook + email + rule set

OUTPUTS

- Routed alerts in real time

HOW TO USE IT

Define rules once — the right alert goes to the right place automatically.

WHAT IT DOES

One-page executive summary of crisis, trends and competitor activity — every morning.

Why it matters: Use to stay informed without doom-scrolling tools — one morning email summarises everything that moved overnight in 60 seconds of reading.

Live view: AI Daily Digest

INPUTS

- Auto-pulled signals

OUTPUTS

- Daily PDF / inbox digest

HOW TO USE IT

Subscribe once — the digest lands in your inbox every morning.

WHAT IT DOES

Downloads TikTok videos for creative research and archival.

Why it matters: Best for creative research and inspiration boards — save the videos you want to riff on without screen-recording them on your phone.

Live view: TikTok Downloader

INPUTS

- TikTok video URL

OUTPUTS

- Downloadable MP4

HOW TO USE IT

Paste the URL and click Download.

WHAT IT DOES

Real-time rule-based contact segments that re-evaluate every 15 minutes — push them straight to a HubSpot list or bind them to a drip sequence.

Why it matters: Best for segments that change daily (e.g. "free trial day 6, no upgrade") — the 15-min refresh keeps every downstream send accurate.

Live view: Dynamic Audiences (live)

INPUTS

- Rule builder (field · operator · value)
- Optional drip-sequence binding
- Optional HubSpot list mirror

OUTPUTS

- Live member count + preview
- Auto-enrolled drip campaign sends
- Mirrored HubSpot static list

HOW TO USE IT

Click "+ New Audience", chain the rules you want (e.g. last_seen < 7d AND plan = "free"), preview the matching contacts, then bind a drip and/or mirror to HubSpot. The 15-min cron keeps membership live.

WHAT IT DOES

Visual multi-step automation — chain trigger / wait / condition / action nodes to send email, SMS, WhatsApp, AI voice or web push as a contact progresses.

Why it matters: Use for any flow with more than one step — visual node graphs prevent the "it sent twice / it never sent" bugs of stitched-together drips.

Live view: Customer Journey Builder

INPUTS

- Trigger (signal, audience join, manual)
- Wait + condition nodes
- Action nodes (email/SMS/WhatsApp/voice/push/tag)

OUTPUTS

- Active journey runs per contact
- Per-step delivery log
- Pause/Activate state per journey

HOW TO USE IT

Click "+ New Journey", drag the nodes onto the canvas, wire them, and Activate. The 60-second runner advances every contact whose next step is due.

WHAT IT DOES

Write the message once, fan it out across Email + SMS + WhatsApp + AI Voice + Web Push in a single send. Each channel's configuration status is shown up-front.

Why it matters: Best for time-critical announcements (sale, outage, event) — fan one message across every channel so no segment misses it.

Live view: Omnichannel Composer

INPUTS

- Audience or contact list
- Channel checklist
- Subject + body (with per-channel overrides)

OUTPUTS

- Per-channel send status
- Per-contact delivery breakdown
- Bounces / failures isolated per channel

HOW TO USE IT

Pick the audience, tick the channels you have wired (greyed if not configured), write your message, click Send. Each contact gets one send per channel; one failure never aborts the whole batch.

WHAT IT DOES

Calendly-style public booking page — define your availability, share the link, and prospects self-book a slot with automatic confirmation emails.

Why it matters: Use the moment you stop wanting to email-ping-pong about times — a public booking link removes 5+ message rounds per meeting.

Live view: Bookings (public scheduler)

INPUTS

- Availability windows + slot length
- Public slug + meeting type
- Required form fields

OUTPUTS

- Booked appointments in your dashboard
- Confirmation emails to both parties (Resend)
- Optional ICS calendar attachment

HOW TO USE IT

Set your weekly availability once, pick a slug, share the public link. Bookings land in the dashboard and trigger a confirmation email automatically.

Grow

Optimise visibility, automate execution and measure long-term performance.

Goals & Targets

GROW

WHAT IT DOES

Define and track your primary business and marketing KPIs.

Why it matters: Use before any quarter starts — without explicit numeric goals every dashboard is just decoration, not decision support.

Live view: Goals & Targets

INPUTS

- Goal definitions + targets + windows

OUTPUTS

- Progress chart + variance to target

HOW TO USE IT

Set goals once — the platform tracks variance automatically.

WHAT IT DOES

Long-term performance tracking against business goals.

Why it matters: Best for proving marketing ROI to finance — long-term trend lines tell a much more honest story than any single weekly snapshot.

Live view: KPI Tracker

INPUTS

- Data from connected ad/analytics accounts

OUTPUTS

- Growth-trend visualisations
- Goal-completion charts

HOW TO USE IT

Set your goals once, then check progress weekly. Anomalies are flagged automatically.

WHAT IT DOES

Marketing-command view showing upcoming launches and system risks.

Why it matters: Use as your daily landing page in InfoGenie — one screen shows what is launching today and what is broken right now.

Live view: Action Center

INPUTS

- Refresh trigger

OUTPUTS

- Live status feed
- Upcoming milestones
- Optimisation opportunities

HOW TO USE IT

Visit daily as your single pane of glass. Click any item to jump to the relevant module.

WHAT IT DOES

Automated SEO execution — article generation, on-page fixes and backlink tracking.

Why it matters: Best for content-led businesses with consistent publishing needs — automation removes the bottleneck that usually kills SEO programs after month three.

Live view: AutoSEO Pro

INPUTS

- WordPress credentials (API)
- Target keywords

OUTPUTS

- Published articles
- Backlink reports
- Keyword research

HOW TO USE IT

Connect WordPress in Settings, choose target keywords, and let AutoSEO publish optimised articles on a schedule.

WHAT IT DOES

Grades existing content against SEO and readability benchmarks.

Why it matters: Use on every page before publish — a single content score catches the SEO and readability issues that quietly suppress traffic for years.

Live view: Content Scorer

INPUTS

- Page URL or pasted text

OUTPUTS

- Score + ranked improvement list

HOW TO USE IT

Paste the content, review the score, fix the items at the top of the list.

Internal Link Suggester

GROW

WHAT IT DOES

AI recommendations for building an internal-link structure that lifts site authority.

Why it matters: Best for sites with 100+ articles — strong internal linking is the single highest-leverage SEO tactic most teams completely ignore.

Live view: Internal Link Suggester

INPUTS

- Source page URL

OUTPUTS

- Suggested target pages + anchor text

HOW TO USE IT

Run on each new piece of content — apply the top suggestions in your CMS.

WHAT IT DOES

Hub for managing and analysing conversion-rate-optimisation experiments.

Why it matters: Use to make every traffic dollar work harder — a 10% lift in conversion is mathematically equivalent to a 10% increase in your entire ad budget.

Live view: CRO Lab

INPUTS

- Experiment definitions + traffic split

OUTPUTS

- Statistical lift + winning variant

HOW TO USE IT

Define the experiment, monitor lift, ship the winner.

WHAT IT DOES

Independent deep-dive audits for various AI-performance metrics.

Why it matters: Best for diagnosing why AI engines do not cite you — these audits show specifically which entities, prompts and pages are missing.

Live view: AI Audit Suite

INPUTS

- Audit selection (Prompt Coverage, Entity Mapping, etc.)

OUTPUTS

- Reports on answer accuracy, AI Overviews, citation-to-traffic attribution

HOW TO USE IT

Pick the audit type and click Run. Reports save to the Action Center for follow-up.

WHAT IT DOES

Tracks how your brand is cited by LLMs (ChatGPT, Claude, Gemini, Perplexity).

Why it matters: Use monthly — your share of AI answers is becoming as important as your share of Google rankings, and almost no team is measuring it yet.

Live view: AI Visibility Intelligence

INPUTS

- Run AI Audit trigger

OUTPUTS

- Citation tracking
- Brand sentiment in AI responses
- Optimisation recommendations

HOW TO USE IT

Click Run AI Audit. The dashboard shows where you appear (and where you don't) in AI answer engines.

Meta Ads Insights

GROW

WHAT IT DOES

Live performance data from your Meta Ads account — spend, ROAS, top creatives.

Why it matters: Best for catching Meta surprises early — the platform UI buries the metrics that actually matter; this surfaces them in a single chart.

Live view: Meta Ads Insights

INPUTS

- Meta access token (Settings)

OUTPUTS

- Live spend / ROAS chart + top ad list

HOW TO USE IT

Connect Meta in Settings — data refreshes hourly.

WHAT IT DOES

Real-time performance metrics and top-ad tracking for Google Ads.

Why it matters: Use weekly to spot wasted spend — Google Ads quietly burns budget on broad-match terms unless someone is watching the search-terms report.

Live view: Google Ads Insights

INPUTS

- Google Ads OAuth (Settings)

OUTPUTS

- Live spend, conversions, top ads

HOW TO USE IT

Connect Google Ads in Settings — the optimiser uses this feed too.

TikTok Ads Insights

GROW

WHAT IT DOES

Spend, ROAS and campaign performance from the TikTok Marketing API.

Why it matters: Best for brands testing TikTok seriously — without a clean view of ROAS by creative, you cannot tell which video format actually works for you.

Live view: TikTok Ads Insights

INPUTS

- TikTok access token + advertiser ID (Settings)

OUTPUTS

- Spend / ROAS / video metrics

HOW TO USE IT

Connect TikTok in Settings to surface live ad data.

WHAT IT DOES

Aggregated performance data across all connected social channels.

Why it matters: Use to find the channel mix worth investing in — if a platform is not growing reach AND engagement, it is not worth the team time.

Live view: Social Analytics

INPUTS

- Connected social accounts

OUTPUTS

- Per-channel reach, engagement, follower trend

HOW TO USE IT

Connect channels — the dashboard rebuilds automatically.

WHAT IT DOES

24/7 reinforcement-learning engine that optimises ad campaigns automatically.

Why it matters: Best for buyers managing 10+ campaigns — the optimiser does in 6 hours what would take a media buyer all week, while you sleep.

AI Campaign Optimizer
Continuously monitors your live ad campaigns, pauses underperformers, and reallocates budget to winners. Decisions logged below — turn on apply mode when you're ready to let the AI act on your accounts.

MODE
TRACKED: 1 | OPTIMIZER ON: 1 | DECISIONS 24H: 0 | PLATFORMS: Meta, Google, TikTok
Buttons: Switch to LIVE, Run optimizer now

Tracked Campaigns (1)

CAMPAIGN	PLATFORM	7D SPEND	7D ROAS	TARGET ROAS	DAILY BUDGET	OPTIMIZER
Lookalike Audience - High-Value Segments	Meta	\$0.00	—	2.80	\$100.00	☒

Optimizer Decisions Log
No decisions yet. The optimizer runs every 6 hours, or click "Run optimizer now" above.

72-Hour Creative Auto-Refresh — Meta only
Buttons: Disable, Switch to LIVE, Run refresh now
Status: Disabled (off by default) | DRY-RUN - generating only
Every 24h, scans active ads under enabled Meta campaigns. Any ad >72h old that has spent ≥\$25 with CTR <0.5% or ROAS <50% of target gets a fresh GPT-4o headline + body + new get-image-1 visual, uploaded to Meta as a PAUSED ad in the same ad set (so you approve before it spends). The old ad is paused. New ads stay paused regardless of mode — humans always approve before activation.
No refreshes yet. The cron runs every 24h, or click "Run refresh now" above. Needs at least one Meta campaign with the optimizer ON and ads >72h old that are underperforming.

Multi-Armed Bandit — Ad-Set Budget Allocator — Meta only
Buttons: Enable, Switch to LIVE, Run bandit now
Status: Disabled (off by default) | DRY-RUN - sampling only
Every 10h, for each enabled Meta campaign with ≥2 active ad sets, draws a Thompson sample from Beta(1 conversions+1, <1 clicks+conv+1) per ad set, multiplies by AOV, and reallocates the campaign's existing budget pool. Floors at 10% per arm (preserves exploration), ceilings at 60% (no winner-takes-all). Only changes \$1 / >10% are pushed to Meta. Total campaign budget is preserved — money just moves between ad sets.
No bandit runs yet. Needs at least one Meta campaign with ≥2 active ad sets and the optimizer ON. Click "Run bandit now" above.

Why did the AI do this? — full decision audit log
No decisions yet.
Every PAUSE / SCALE BUDGET / HOLD / CREATIVE REFRESH / BANDIT REALLOCATION the optimizer made — with the exact rule that fired and the before/after values. Read this if a campaign behaves unexpectedly.
No decisions logged yet. The optimizer runs every 6 hours; click "Run optimizer now" above to force a run.

Day-part Budget Shifting — hour-of-day performance
14-day rolling window, scored by ROAS + CPA + CTR (in that order), UTC hours.
Recommendation only — surfaces the top 4 and bottom 4 hour-of-day windows so you can apply a day-parting schedule in your ad platform.
No day-parting analysis yet. Click "Re-analyze now" — needs at least one optimizer-enabled campaign with ≥\$25 spend in the last 14 days.

Predictive Creative Fatigue — refresh BEFORE performance crater
0 predicted fatigue | 0 stable / improving
Linear regression on each creative's daily CTR over 14 days. If the slope is negative AND projected CTR drops below 0.5% within 3 days — flagged so you (or the 72-hour Creative Auto-Refresh) can swap it out before performance actually crater.
No forecasts yet. Click "Re-forecast now" — needs active creatives under optimizer-enabled campaigns with ≥5 days of impressions data.

Live view: AI Optimizer

INPUTS

- Connected ad accounts + risk thresholds

OUTPUTS

- PAUSE / SCALE / HOLD recommendations every 6 hours

HOW TO USE IT

Start in dry-run, review the moves, then flip to live mode when comfortable.

WHAT IT DOES

Integrated view of Google Search Console and Google Analytics 4 data.

Why it matters: Use to merge SEO and product data in one place — landing-page conversion is what closes the loop between Search Console and GA4.

Live view: GSC / GA4 Hub

INPUTS

- GSC + GA4 OAuth (Settings)

OUTPUTS

- Search query + landing-page performance

HOW TO USE IT

Connect GSC and GA4 in Settings — the hub merges both feeds.

WHAT IT DOES

AI-powered analysis of user behaviour and product usage from Amplitude.

Why it matters: Best for product-led growth teams — funnel insights surface drop-off points humans typically miss because the data is too granular to scan.

Live view: Amplitude AI Agents

INPUTS

- Amplitude API key

OUTPUTS

- Funnel insights + behavioural cohorts

HOW TO USE IT

Connect Amplitude — the agents surface insights you would normally miss.

Blended Performance

GROW

WHAT IT DOES

Unified view of performance across all paid and organic channels.

Why it matters: Use for board-level reporting — blended CAC and ROAS are the only numbers a CEO or CFO actually cares about, not platform-by-platform stats.

Live view: Blended Performance

INPUTS

- Connected ad + analytics accounts

OUTPUTS

- Blended CAC, ROAS and revenue chart

HOW TO USE IT

Use weekly to see the big picture across every channel.

WHAT IT DOES

Multi-touch attribution to determine the true ROI per channel.

Why it matters: Best for shops running 4+ paid channels — multi-touch attribution finally answers the "which channel really drives revenue?" debate honestly.

Live view: Attribution & ROI

INPUTS

- Tracked conversions + channel data

OUTPUTS

- Per-channel attributed revenue + ROI

HOW TO USE IT

Compare attribution windows to see which channel really drives revenue.

WHAT IT DOES

Accurate ROAS calculation by blending ad spend with real-time revenue.

Why it matters: Use when offline revenue matters — Meta and Google only see the ad-attributed portion; True ROAS includes the closed-deal data they cannot see.

The screenshot shows the InfoGenie 'True ROAS' dashboard. At the top, there's a navigation bar with 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage' tabs. The 'Grow' tab is active. Below the navigation bar, a blue banner explains 'True ROAS — Offline + Online Revenue'. The main dashboard area is divided into two sections. The top section, 'True ROAS — last 30 days', displays five metrics: True ROAS (Online + offline + spend), Reported ROAS (What ad platforms see), Online Revenue (\$0, From ad platforms), Offline Revenue (\$0, From CRM / CSV), and Total Spend (\$0, Last 30d ad spend). Below this, there are three tabs: 'Conversions', 'Revenue Lag', and 'Settings'. The 'Conversions' tab is active, showing two options: 'Upload CSV' (with a 'Choose File' button and 'No file chosen' text) and 'Sync HubSpot' (with a 'Sync now' button and a 'Token configured' status). A message at the bottom states: 'No offline conversions yet. Upload a CSV or sync HubSpot below.'

Live view: True ROAS

INPUTS

- Spend feed + revenue feed

OUTPUTS

- True ROAS vs platform-reported ROAS

HOW TO USE IT

Use to spot platforms inflating their attributed revenue.

Predictive Churn Scorer

GROW

WHAT IT DOES

AI predicts which customers are at risk of leaving based on activity patterns.

Why it matters: Best for subscription and SaaS businesses — saving an at-risk customer in week one of the risk window is 5x cheaper than winning a new one.

Live view: Predictive Churn Scorer

INPUTS

- Customer activity data

OUTPUTS

- Risk score per customer + reasons

HOW TO USE IT

Run weekly — push high-risk customers into a Re-Engage drip.

WHAT IT DOES

The InfoGenie methodology page — Awareness !' Acquisition !' Activation !' Retention !' Revenue with the named tools that map to each stage.

Why it matters: Best as a quarterly sanity check — confirms you have a tool firing in every funnel stage instead of only optimising one.

Live view: Growth Methodology (5-stage)

INPUTS

- Read-only — sourced from the platform tier index

OUTPUTS

- Per-stage tool list
- Recommended weekly cadence
- KPI examples

HOW TO USE IT

Open at the start of each quarter to confirm you have a tool firing in every stage of the funnel.

WHAT IT DOES

Single button that fans the same prompt across ChatGPT, Claude, Gemini and Perplexity in parallel — using DataForSEO's AI Optimization endpoint — so you can see exactly how each major engine answers the question your customers ask.

Why it matters: Use whenever you launch a positioning change — see in 30 seconds whether all four AI engines now describe you correctly or are still citing your old story.

INPUTS

- Prompt / query
- Engine whitelist (defaults to all 4)
- Optional location + language

OUTPUTS

- Side-by-side answer table per engine
- Citation list per answer
- Live elapsed-time timer next to the spinner
- Cost ~\$0.0088 per fan-out

HOW TO USE IT

Open AI Visibility, click the  button, type the prompt your customers actually ask. The four engines run in parallel and the modal shows every answer plus which sources each engine cited.

Manage

Operations, reporting, and platform configuration.

TOOLS

- Master Calendar
- Launch Calendar
- Re-Engage
- Automations
- Stakeholders
- AI Meeting Note Summariser
- Campaign Results & Action History
- Weekly Auto-PDF Report
- Cross-Channel Report
- C-Suite Executive Reports
- White-Label Reports
- Bulk Reporting
- Agency Hub & Reports
- Technical Suite
- Workspaces & Team
- Brand Calendar (10 categories)
- Budget Board (monitor + spend)
- Web Analytics (acquisition + behaviour)
- Minutes of Meeting (AI Team)
- 7-Day Marketing Playbook
- Real-time Signal Triggers
- Integrations & Settings
- Marketing Projects

WHAT IT DOES

Unified view of all scheduled marketing activity — campaigns, content, social, launches.

Why it matters: Use to stop double-booking and content collisions — when every team works in the same calendar, last-minute conflicts disappear.

Live view: Master Calendar

INPUTS

- Auto-sync from other modules

OUTPUTS

- Global timeline of marketing operations

HOW TO USE IT

Open Master Calendar to see every scheduled action. Click any item to edit in its source module.

Launch Calendar

MANAGE

WHAT IT DOES

Specific timeline for product and feature releases.

Why it matters: Best for product, marketing and PR coordination — a launch calendar makes sure ads, content and press all hit the same week instead of staggered.

MANAGE | LAUNCH CALENDAR | Launch Calendar Schedule campaign go-live dates — get 24h & 1h reminders in your bell + stakeholder inboxes

Schedule a launch

Launch name (e.g. Q2 product launch) mm/dd/yyyy, --:-- -- Email

Optional notes — what's launching, owner, success metric...

Reminders fire automatically: 24h before, 1h before, and at go-live. Stakeholders get an email at every reminder.

+ Schedule launch

No launches scheduled yet — schedule your first one above.

Source: InfoGenie Launch Engine - high confidence - data/launches.json (file persistence) + setInterval 60s sweeper

Live view: Launch Calendar

INPUTS

- Launch records (name, date, owner)

OUTPUTS

- Launch-only calendar view

HOW TO USE IT

Add each launch — InfoGenie reminds you of upcoming releases.

WHAT IT DOES

Tools for customer retention and win-back campaigns.

Why it matters: Use quarterly on dormant customers — winning back a churned customer is 4-6x cheaper than acquiring a brand-new one of equal value.

Live view: Re-Engage

INPUTS

- Customer data segments

OUTPUTS

- Re-engagement campaign automation

HOW TO USE IT

Upload or pull a customer list, choose a segment, and launch a re-engagement sequence.

WHAT IT DOES

Workflow builder for connecting different parts of the marketing stack.

Why it matters: Best for connecting tools that do not natively talk — turn "I should remember to do X when Y happens" into a rule that just runs.

Live view: Automations

INPUTS

- Trigger / Action definitions

OUTPUTS

- Cross-platform automated workflows

HOW TO USE IT

Pick a trigger (e.g. competitor budget surge) and link it to an action (e.g. increase Meta bids).

WHAT IT DOES

Manage team members and external partners involved in your marketing operation.

Why it matters: Use to attach a real owner to every task — work without a named owner is the single biggest reason marketing tasks slip every cycle.

MANAGE | STAKEHOLDERS Stakeholders Add the people who get a digest email when a high-severity alert fires (max one per 30 min)

Add stakeholder

Full name

email@company.com

+ Add to alert list

When emails fire

- Any new alert with severity $\geq$ high from /api/alerts/check
- Launch reminders fired by the calendar (24h, 1h, live)
- Throttled to one digest every 30 minutes to avoid noise

Last digest sent: —

Resend configured ✓

Webhook channels — real-time alerts to chat

Same alerts as the email digest, delivered instantly to Slack, Teams, Telegram, or any generic HTTPS endpoint. No API keys from us — paste your own webhook URL.

Slack Label (e.g. #marketing) https://hooks.slack.com/services/T0/B0/xxxxxxx + Add

In Slack: Apps → Incoming Webhooks → Add to channel → copy the webhook URL.

0 webhooks configured Last dispatch: —

No webhooks yet — add one above to start streaming alerts to chat.

Live view: Stakeholders

INPUTS

- Person records + roles

OUTPUTS

- Stakeholder directory

HOW TO USE IT

Add people once — assign owners on tasks across the platform.

AI Meeting Note Summariser

MANAGE

WHAT IT DOES

Summarises sales-call transcripts, generates BANT scoring and pulls out action items.

Why it matters: Best for sales teams running 10+ calls a week — a 30-second summary plus BANT scoring beats nobody reading your transcripts ever.

The screenshot shows the InfoGenie web application interface. At the top, there's a dark blue header with the 'InfoGenie' logo on the left and several navigation buttons ('Pro', 'Manual', '+ Analyse') on the right. Below the header is a horizontal menu with icons and labels for 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The 'Manage' tab is currently selected. The main content area has a blue header bar with the text 'REACH > MEETING NOTES' and 'AI Meeting Note Summarizer'. Below this, a subtitle reads: 'Paste any sales-call transcript → get summary, BANT scoring, action items, deal-stage prediction, risks and next-step recommendation.' The central part of the interface is a white box titled 'Sales-Call Transcript' containing a large text area for pasting a transcript. Below the text area are three input fields: 'Contact name (optional)', 'Company (optional)', and 'Role (optional)'. At the bottom of the white box is a blue button labeled 'Summarize + Score'.

Live view: AI Meeting Note Summariser

INPUTS

- Pasted transcript or recording

OUTPUTS

- Summary + BANT score + action list

HOW TO USE IT

Drop a transcript, get the summary in seconds.

Campaign Results & Action History

MANAGE

WHAT IT DOES

Live tracking of all platform-initiated actions and their measurable impact.

Why it matters: Use as your audit trail — knowing exactly what InfoGenie did, when and what changed afterward is what builds trust in the platform.

Live view: Campaign Results & Action History

INPUTS

- Export PDF trigger

OUTPUTS

- PDF reports
- Historical action logs
- Performance lift summaries

HOW TO USE IT

Filter by date range and click Export PDF for a board-ready summary.

Weekly Auto-PDF Report

MANAGE

WHAT IT DOES

Auto-aggregates weekly brand performance into a PDF, emailed every Monday.

Why it matters: Best for accountability — a recurring auto-report Monday morning means stakeholders never have to ask "how are we doing?" again.

The screenshot shows the 'Manage' page for the 'Weekly Auto-PDF Report' in the InfoGenie dashboard. The interface is dark-themed with a blue header bar. The main content area has a blue header with the title 'Weekly Auto-PDF Report' and a description: 'One PDF per brand per week — auto-aggregates Crisis Radar, Share of Voice, Mention Volume, Press Releases, VoC, Trends, AI Optimizer decisions and YouTube activity. Auto-emailed every 7 days via Resend.' Below this is a 'Generate / Send Now' section with input fields for 'BRAND' (containing 'e.g. Nike') and 'EMAIL TO (for send)' (containing 'you@example.com'). There are buttons for 'Preview', 'Download PDF', and 'Send now'. Below this is an 'Auto-send subscriptions (every 7 days)' section with an 'Add' button and a note: 'No subscriptions yet. Add one above to get a weekly auto-emailed PDF.' At the bottom is a 'Recent runs' section with a note: 'No runs yet.'

Live view: [Weekly Auto-PDF Report](#)

INPUTS

- Recipient list

OUTPUTS

- Branded weekly PDF in their inbox

HOW TO USE IT

Set the recipients once — InfoGenie ships the report every Monday morning.

Cross-Channel Report

MANAGE

WHAT IT DOES

Comparative analysis across multiple marketing platforms in one view.

Why it matters: Use monthly to rebalance budget — channels almost never deserve equal funding, and side-by-side comparison surfaces the obvious shifts.

Live view: Cross-Channel Report

INPUTS

- Connected ad + organic accounts

OUTPUTS

- Side-by-side channel comparison

HOW TO USE IT

Use to spot which channels are pulling their weight and which aren't.

C-Suite Executive Reports

MANAGE

WHAT IT DOES

Role-specific board-ready dashboards (CEO / CMO / CFO / COO).

Why it matters: Best for monthly leadership reviews — each role lens shows the metrics that exec actually cares about, not a generic everything-dashboard.

Live view: C-Suite Executive Reports

INPUTS

- Role selection

OUTPUTS

- Executive PDF reports

HOW TO USE IT

Pick the role lens, click Generate, download the board-ready PDF.

WHAT IT DOES

Customisable reporting templates for agencies to present to clients under their own brand.

Why it matters: Use if you are an agency — branded reports are what justify your retainer, not raw screenshots from somebody else's tool.

White-Label Reports

Replace InfoGenie's purple/navy palette, logo and footer with your own agency brand on every PPTX / PDF / XLSX export. Toggle on, set your colours, paste a logo, and every existing report regenerates in your brand. Preview live before applying.

Brand Profile ☐ Apply white-label to all exports

Agency / Brand name:

Footer text (overrides "Powered by InfoGenie"):

Primary colour (cover + headers):

Accent colour (footer line):

Body text colour:

Logo (PNG or JPG, max 256KB): No file chosen

No logo uploaded.

☐ Hide "Powered by InfoGenie" line when no custom footer is set

Live Preview

Generate a sample report with the current settings to see exactly how your branded exports will look.

Live view: White-Label Reports

INPUTS

- Logo + colours + cover content

OUTPUTS

- Branded PDF report

HOW TO USE IT

Upload your branding once — every report can be re-skinned in one click.

WHAT IT DOES

Generate and export multiple reports simultaneously for large accounts.

Why it matters: Best for agencies managing 10+ clients — generating reports one at a time is the fastest way to lose a Friday afternoon.

The screenshot shows the InfoGenie web application interface. At the top, there's a navigation bar with the InfoGenie logo and several tabs: 'Pro', 'Manual', and '+ Analyse'. Below this is a secondary navigation bar with icons for 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage'. The 'Manage' tab is active. The main content area has a blue header with the text 'REACH > BULK REPORTING' and a title 'Bulk Reporting'. Below the title, there's a paragraph explaining the feature: 'Upload a CSV of website URLs (one per row, no header needed) and InfoGenie will batch-run a full SEO audit on every URL. Download a zip of branded PDFs (uses your White-Label profile if enabled) plus a flat CSV of every check, ready for prospecting or client deliverables. Up to 500 URLs per run, 4 audits in parallel, resumes automatically if the server restarts.' Below this is a form titled 'Upload CSV of URLs'. It has a 'Run name' field with the example 'e.g. Cape Town agency prospects' and a 'CSV file (one URL per row, max 500)' field with a 'Choose File' button and 'No file chosen' text. There's a checkbox for 'Render every page in a real browser (slower, but works for JS-heavy SPAs)' and a green 'Start Batch' button. At the bottom of the form, it says 'PDFs use your [White-Label](#) brand profile if it's enabled.' Below the form is a message: 'No bulk runs yet. Upload a CSV above to get started.'

Live view: Bulk Reporting

INPUTS

- Account selection + report type

OUTPUTS

- Batch ZIP of PDFs

HOW TO USE IT

Select the accounts, click Generate — download the ZIP when ready.

WHAT IT DOES

Multi-client management and white-label reporting interface.

Why it matters: Use to keep client work properly separated — multi-tenant isolation prevents the embarrassing "wrong client's data" moment.

GROW • AGENCY
AGENCY HUB • MY AGENCY

[+ Add New Client](#)

Live view: Agency Hub & Reports

INPUTS

- Client account configurations

OUTPUTS

- Branded client reports
- Multi-tenant dashboard

HOW TO USE IT

Add clients in Settings, then switch context using the client dropdown to manage their campaigns separately.

WHAT IT DOES

Technical SEO and site-health audits.

Why it matters: Best for sites that have grown organically over years — technical debt accumulates silently and the full sweep is the only way to catch it all.

Live view: Technical Suite

INPUTS

- Run All Audits trigger

OUTPUTS

- Crawlability scores
- Index-readiness report
- Technical health grade

HOW TO USE IT

Click Run All Audits to execute the full technical sweep. Each finding includes a fix.

WHAT IT DOES

Manage collaborative spaces and team permissions.

Why it matters: Use whenever multiple brands or clients live under one account — workspaces stop their data, audiences and campaigns from contaminating each other.

The screenshot shows the 'Workspaces & Team' management page in the InfoGenie application. The top navigation bar includes 'Analyse', 'Create', 'Reach', 'Grow', and 'Manage' (selected). The 'Manage' dropdown menu is open, showing 'Workspaces & Team' as the active section. Below the navigation bar, there's a blue header with the title 'Workspaces & Team' and a description: 'Run multiple brands or clients in isolated workspaces — invite team-mates, assign roles (Owner / Editor / Viewer) and audit every action.' A button 'Open Workspace Console' is also present.

The main content area is divided into three sections:

- Workspaces (3)**: A list of workspaces with details like members, campaigns, and plan. The 'your brand Main' workspace is highlighted as 'CURRENT'.
- Recent activity**: A list of recent actions performed by team members, such as launching campaigns, inviting members, and updating landing pages.
- Team Members (5)**: A table listing team members with their roles, last active times, and 2FA status.

MEMBER	ROLE	LAST ACTIVE	2FA
Alex Reyes alex@	Owner	Now	✓ ON
Priya Shah priya@	Admin	12 min ago	✓ ON
Jordan Wei jordan@	Editor	2h ago	⚠ OFF
Sam Brooks sam@	Editor	Yesterday	✓ ON
Casey Lee casey@	Viewer	3 days ago	⚠ OFF

Live view: Workspaces & Team

INPUTS

- Workspace + member invites

OUTPUTS

- Per-workspace data isolation + roles

HOW TO USE IT

Create a workspace per client or brand; invite the relevant team members.

WHAT IT DOES

Unified marketing planner — one month-grid view across Brand, Email, SMS+WhatsApp, Social, Content, Ads, Event, Surveys, Website and your own activities.

Why it matters: Use as your single source of truth for "what is going out this month" — one view across all 10 channels prevents collisions.

Live view: Brand Calendar (10 categories)

INPUTS

- Category filter (sidebar)
- Click-to-add modal: title · category · date · notes

OUTPUTS

- Cross-category calendar grid
- Per-day item count
- Items persisted in brand_calendar_items table

HOW TO USE IT

Open Brand Calendar, tick the categories you care about, click any day to add an item. Filter the sidebar to focus on one channel at a time.

Budget Board (monitor + spend)

MANAGE

WHAT IT DOES

Per-month spend tracker — set a target, allocate per channel (paid social, search, content, etc), log spend, and see actual vs target with a 30-day trend chart.

Why it matters: Best for monthly spend discipline — actual vs target with channel breakdowns turns "we overspent" into "we overspent on Meta".

Live view: Budget Board (monitor + spend)

INPUTS

- Monthly target
- Per-channel allocation %
- Manual or API spend entries

OUTPUTS

- Target vs actual gauge
- Per-channel utilisation bars
- 30-day spend trendline

HOW TO USE IT

Set the month's target on the 1st, allocate across channels, then log spend as it happens (or let the optimizer mirror its outflows automatically).

WHAT IT DOES

Read-only aggregator that surfaces what InfoGenie can already see without GA4 — channel sessions/impressions from ad insights, top landing pages, mobile PageSpeed scores.

Why it matters: Use as a fast read of acquisition without GA4 — sessions, top landing pages, and PageSpeed in one place.

Live view: Web Analytics (acquisition + behaviour)

INPUTS

- Auto-pulled from ad_insights, landing_pages, web_vitals (last 30d)

OUTPUTS

- Channel sessions table
- Top landing pages list
- Mobile PageSpeed scores per page

HOW TO USE IT

Open it any time for a fast read of what is already being captured. Connect GA4 in Settings to unlock full Source/Medium and Country breakdowns.

WHAT IT DOES

Auto-generated meeting minutes for your AI executive team — summarises what each officer (Marketing, Sales, Analyst, etc.) executed in the last 24 hours.

Why it matters: Best for replacing the daily standup — auto-generated minutes for your AI team mean stakeholders always know what was done.

Live view: Minutes of Meeting (AI Team)

INPUTS

- Date range
- Officer filter (optional)

OUTPUTS

- Per-officer activity log
- Decision list
- Open action items

HOW TO USE IT

Open every morning to see what your AI team did overnight. Forward the summary to stakeholders or copy it into your standup notes.

WHAT IT DOES

A strategic-plan checklist (Day 1 Research !' Day 7 Reporting) with an AI Suggest button on every step and a %¶ Run Autonomously option that appends each step as a real task on the matching AI officer.

Why it matters: Use every Monday — a structured 7-day plan with autonomous run beats ad-hoc to-do lists for hitting the week's goals.

Live view: 7-Day Marketing Playbook

INPUTS

- Pick a day or click "Run All 7"
- AI Suggest per step (optional)

OUTPUTS

- Per-step headline + rationale + 3-5 actions + KPI + risk
- Tasks created on AI officers
- Run history kept in `playbook_7day_runs_v1`

HOW TO USE IT

New every Monday: open Day 1, click Ø>Ý AI Suggest for live recommendations, then %¶ Run Autonomously to dispatch the work. Repeat through Day 7 — or hit "Run All 7" once.

WHAT IT DOES

Bridge between observable events (mention spike, sentiment drop, competitor price change, trending keyword, negative review, crisis alert, manual) and an automated journey enrolment.

Why it matters: Best for "always-on" automation — when a competitor changes price or sentiment drops, the response journey fires without anyone watching.

Live view: Real-time Signal Triggers

INPUTS

- Trigger type + match condition
- Target journey to enrol contact in
- Enabled / disabled toggle

OUTPUTS

- New journey runs spawned per matched signal
- Manual fire UI for testing
- Per-trigger fire history

HOW TO USE IT

Pick a signal type, set the match condition, link it to a journey, enable. The trigger fires automatically when the signal hits, or use the manual fire button to test.

WHAT IT DOES

Configuration panel for the entire platform.

Why it matters: Best to revisit quarterly — connected integrations break, tokens expire, and a quiet integration is missed insight you are paying for.

Live view: Integrations & Settings

INPUTS

- API keys, AI model selection, account permissions

OUTPUTS

- Connected platform status
- Global system configuration

HOW TO USE IT

Connect Google Ads, Meta, TikTok, RapidAPI, OpenAI/Anthropic, HubSpot and other integrations from one screen.

WHAT IT DOES

Lightweight project wrapper — name, goal, monthly budget, channels, owner and dates — that other modules can scope themselves to. The active project ID is stored in localStorage so every campaign, audience and report can be attributed to it.

Why it matters: Use as the wrapper for every initiative — when each campaign, audience and report is tagged to a project, attribution and ROI conversations finally get clean.

INPUTS

- Project name + goal
- Monthly budget
- Channel checklist
- Owner + start/end dates

OUTPUTS

- Project record
- Active-project banner across the SPA
- Per-project filter on campaigns and reports

HOW TO USE IT

Click "+ New Marketing Project" from the Manage menu, fill in the brief, click Save. From that moment every campaign you launch and report you generate is tagged with the active project.

WHAT IT DOES

Natural-language Q&A over your own platform data. Asks GPT-4o-mini a question and grounds the answer in a live JSON snapshot of your campaigns, leads, audiences, mentions, ad insights, landing pages, content calendar, budget, bookings, link-in-bio and AI-officer tasks.

Why it matters: Best for the 10-second question you would normally have to dig 5 dashboards to answer — typed in plain English, answered from your real data only.

INPUTS

- Free-text question
- Suggested-question chips on first load

OUTPUTS

- Grounded answer citing the relevant data slice
- Reusable across teams (sales, finance, ops)
- Falls back to raw snapshot when OpenAI key missing

HOW TO USE IT

Open Ask InfoGenie, click a suggested chip or type any question ("Which campaign has the worst ROAS this week?"). The answer is built only from your real data — never the open web.

WHAT IT DOES

Topic + layout in, structured JSON out via GPT-4o-mini, rendered to SVG client-side across 7 layouts (funnel · list · comparison · journey · quadrant · pyramid · cycle). Brand Foundation is auto-injected so every infographic stays on-brand.

Why it matters: Use whenever a slide deserves a visual instead of more bullets — a 30-second infographic lands a point in any board pack faster than a paragraph ever will.

INPUTS

- Topic / brief
- Layout pick (7 options)
- Optional palette override

OUTPUTS

- Rendered SVG infographic
- Downloadable as SVG or PNG
- Saved infographics persisted (kv_store with "infographic:" prefix)

HOW TO USE IT

Pick a layout, type the topic, click Generate. Tweak the JSON if you want to fine-tune, then download as SVG (vector-perfect) or PNG (drop into a slide).

WHAT IT DOES

Free Hotjar / VWO alternative. Stores your Microsoft Clarity Project ID (and optional Data Export API token), surfaces the install snippet for you to paste on your site, deep-links to the Clarity dashboard and — when the token is set — pulls live top-URL, device and browser splits next to your landing-page list.

Why it matters: Best free upgrade you can give a marketing site — actual click and scroll behaviour reveals which buttons are dead and which sections never get reached.

INPUTS

- Clarity Project ID
- Optional Clarity Data Export API token

OUTPUTS

- One-click install snippet
- Clarity deep-link
- Live top-URL / device / browser splits inside InfoGenie

HOW TO USE IT

Create a free Clarity project, paste the ID, copy the snippet into your site head. Add the export token to see the headline metrics inside InfoGenie without leaving the platform.

WHAT IT DOES

Lets you plug any OpenAI-compatible endpoint (Groq, DeepSeek, Mistral, OpenRouter, Together, Azure OpenAI, Ollama, etc.) into InfoGenie. Stored per category — writing, analysis, vision, audio — so each AI feature can be routed to the cheapest or fastest model that fits its needs.

Why it matters: Use to cut AI cost or unlock specialist models — routing writing to Groq and vision to GPT-4o (etc.) can drop your monthly LLM bill by 70% without quality loss.

INPUTS

- Base URL
- API key
- Default model name
- Category (writing / analysis / vision / audio)
- Optional is_default flag

OUTPUTS

- Provider list per category
- Ø>Ÿ Test button (latency + sample output)
- Other tiers route through getDefaultProvider(category) before falling back to built-in clients

HOW TO USE IT

Click "+ Add Provider", drop in the Base URL and API key, pick a default model and category, save. Click Ø>Ÿ Test to confirm the round-trip works, then mark the row Default to make every downstream AI call use it.

WHAT IT DOES

Background monitor that checks your DataForSEO balance live via `/v3/appendix/user_data`, flags critical missing keys (OpenAI, DataForSEO), and warns about placeholder `_DUMMY` values. Every alert lands in the bell icon at the top-right with the red unread badge.

Why it matters: Use to never wake up to a dead campaign — a quiet API balance is the silent killer; this catches it before any feature stops working.

INPUTS

- Auto — no setup needed
- Manual  Credits button in the alerts panel for on-demand sweeps
- Server cron: 8s after boot + every 6h
- Frontend boot fetch + 30-min interval

OUTPUTS

- Low-balance alerts (< \$20 medium / < \$5 high)
- Missing-key alerts naming the exact `KEY_NAME` to add
- De-duplicated — same warning never piles up twice

HOW TO USE IT

Open the bell icon any time you see a red badge. Each alert names the exact problem and the exact Replit secret to set. Click  Credits in the panel header to force an immediate sweep.

AI Team

Your virtual executive team — autonomous AI officers that watch the platform and act on your behalf.

3

TOOLS

-
- **Team Roster**
The roster of every AI officer on your team — Marketing, Sales, Analyst, Content, SEO, CRO, Finance, Operations — each with a job description, KPIs and recent activity.
 - **Finance Officer**
AI officer focused on cost discipline — watches spend vs target across the Budget Board, flags channel overruns, and recommends reallocations.
 - **Operations Officer**
AI officer focused on platform health — confirms integrations are connected, schedulers are firing, drips are delivering, and webhooks are not stuck.

WHAT IT DOES

The roster of every AI officer on your team — Marketing, Sales, Analyst, Content, SEO, CRO, Finance, Operations — each with a job description, KPIs and recent activity.

Why it matters: Use weekly to confirm the autonomous side of the platform is healthy — if an officer is paused or quiet, you are leaving leverage on the table.

Live view: Team Roster

INPUTS

- Click any officer card to drill into their tasks + history

OUTPUTS

- Per-officer status (active / paused)
- Recent task list
- KPI snapshot per officer

HOW TO USE IT

Open Team Roster once a week to confirm every officer is live and producing output. Pause any officer you want to manage manually for a while.

WHAT IT DOES

AI officer focused on cost discipline — watches spend vs target across the Budget Board, flags channel overruns, and recommends reallocations.

Why it matters: Best for founders who hate watching budgets — the officer flags overruns the morning they happen, not at month-end review.

Live view: Finance Officer

INPUTS

- Budget Board targets + actuals (auto-pulled)
- Optional pinned guardrails

OUTPUTS

- Daily spend digest
- Overrun alerts with recommended fix
- Reallocation proposals

HOW TO USE IT

Set the monthly target on Budget Board, then let Finance Officer monitor automatically. Approve or dismiss its proposals from its task feed.

WHAT IT DOES

AI officer focused on platform health — confirms integrations are connected, schedulers are firing, drips are delivering, and webhooks are not stuck.

Why it matters: Use as your platform-health canary — when a number looks off, this officer usually already knows which integration is broken.

Live view: Operations Officer

INPUTS

- Auto-monitored — checks every connected integration

OUTPUTS

- Daily ops digest
- Per-integration health status
- Specific fix recommendations when something is broken

HOW TO USE IT

Check the Ops Officer feed any morning a number looks off — it usually already knows which integration is down and how to fix it.

Glossary

ICP

Ideal Customer Profile — the persona representing your most valuable buyer.

SERP

Search Engine Results Page — what Google returns for a query.

SoV

Share of Voice — your visibility relative to competitors in a channel.

CTR

Click-Through Rate — clicks divided by impressions.

ROAS

Return on Ad Spend — revenue generated per unit of ad spend.

CPC

Cost Per Click — average cost paid for each ad click.

CPA

Cost Per Acquisition — average cost to acquire a customer.

VoC

Voice of Customer — direct quotes and language from real users (often Reddit/reviews).

Win/Loss

Analysis of which competitor messages beat yours and why.

AI Citations

Mentions of your brand in answers from ChatGPT, Claude, Gemini, Perplexity etc.

Battle Plan

The 90-day prioritised execution roadmap InfoGenie generates after analysis.

Auto-Draft

AI-generated reply suggestion that matches your saved brand persona.

Tips, troubleshooting & support

Six rules of thumb that consistently get the best results from InfoGenie. Read them once and revisit when something feels off.

Always start with a fresh analysis

For best results, re-run the analysis whenever you change the target country or notice a major market shift. The dashboard, Battle Plan and competitor cards all derive from this single run.

Use ICP Studio before Reply Studio

Saving a brand persona in ICP Studio means every Reddit reply, ad and email draft will sound like your brand — not generic AI text.

Mix the Tone dropdown carefully

In Reply Studio, picking "Helpful Expert" wins on Reddit; "Bold & Punchy" wins on Twitter/X; "Empathetic" wins on community forums.

Counter This Message " a one-shot

When you click Counter This Message, InfoGenie creates a 3-step counter-strategy. Each step can be edited or rejected before launch.

Hard refresh after platform updates

If buttons appear unresponsive after we ship an update, do a hard refresh (Ctrl/Cmd + Shift + R). The cache buster forces a fresh JS load.

Check Settings !' Integrations weekly

API tokens for Google Ads, Meta, TikTok and RapidAPI can rotate or expire. The Settings panel shows the live status of each connection.

Need help?

Raise an issue from inside the app — the platform sends diagnostic context automatically so we can resolve it faster.
